

MIS 471
Business Process Management

Group Project
2023 | Third Semester

Introduction

Raa Bakery is a small Saudi Instagram business selling baked goods in the Western region.

Business Process Management practices, concepts, tools, and techniques, discussed in the course are employed.

Agenda

What we will discuss today

01 Organizational Background

02 Organization System

03 Process Identification

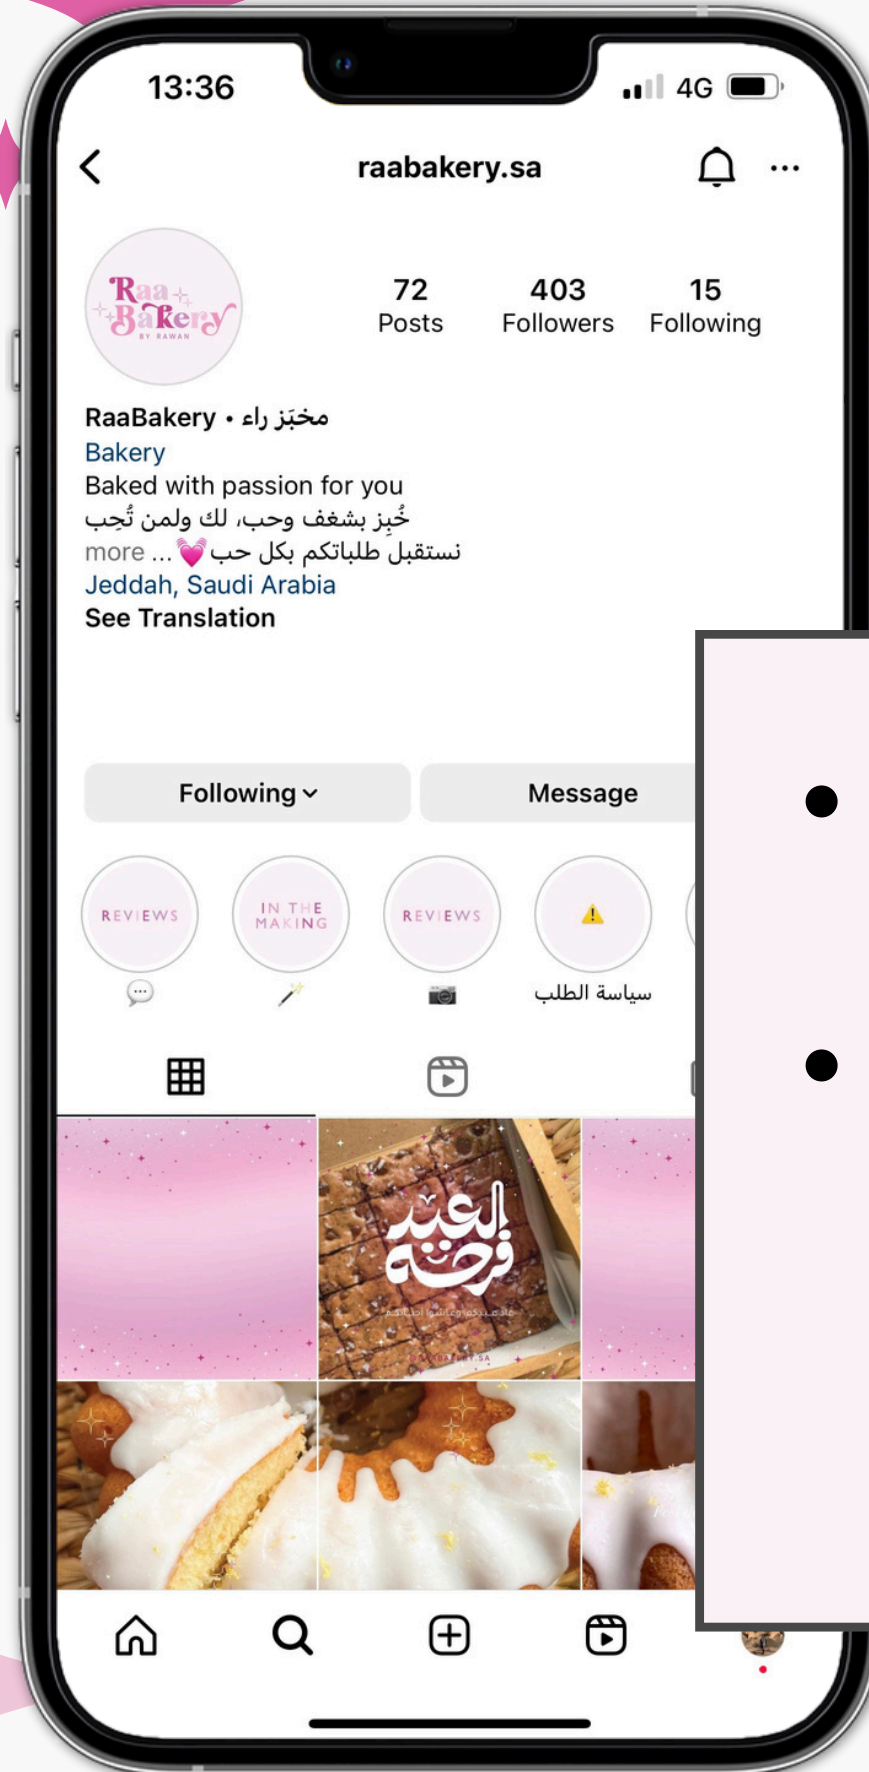

04 Process Discover

05 Problem Analysis

06 Process Redesign

07 Benefits & Outcomes

Organizational Background

- Raa Bakery is a Brownie Business established in July 2021, Jeddah, Saudi Arabia.
- The owner Rawan Baabdullah, she had passion in baking brownies and decided to open a business and share her baked treats with others.

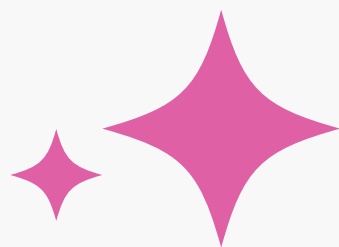

Goals and objectives

Vision: "Become one of the most popular bakeries in the Western Region"

Establish customer base

Maintain customer retention

Organization System

1

Internal actor

Process Participant:
The owner - Rawan

2

External actor

Business Party:
Suppliers, Delivery
personnel, Clients

Customers

Actors who receive value

Internal and External

Raa Bakery
Perspective:

Value obtained is
the payment
being received

Buyer
Perspective:

Value obtained is
receiving the
baked goods

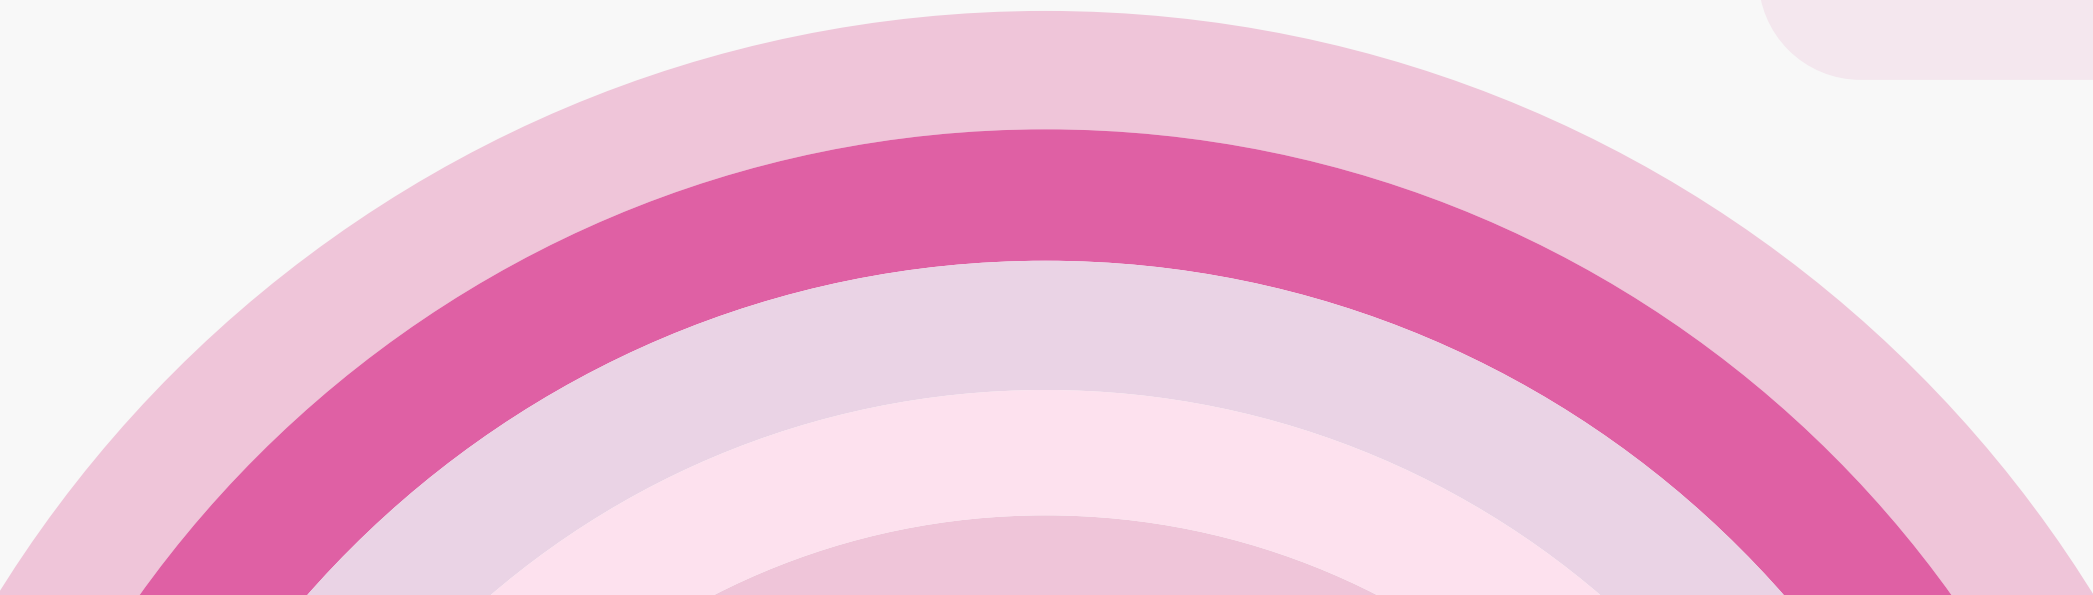

Outcomes +ve / -ve

Completed

Process Identification

Core Processes

1

Development and
Innovation

2

Manage customer
relationship

3

Order Process

4

Supply chain
management

5

Delivery process

Support Processes

1 Manage records

2 Manage financials

3 Manage socials

Management Processes

1

Define a vision

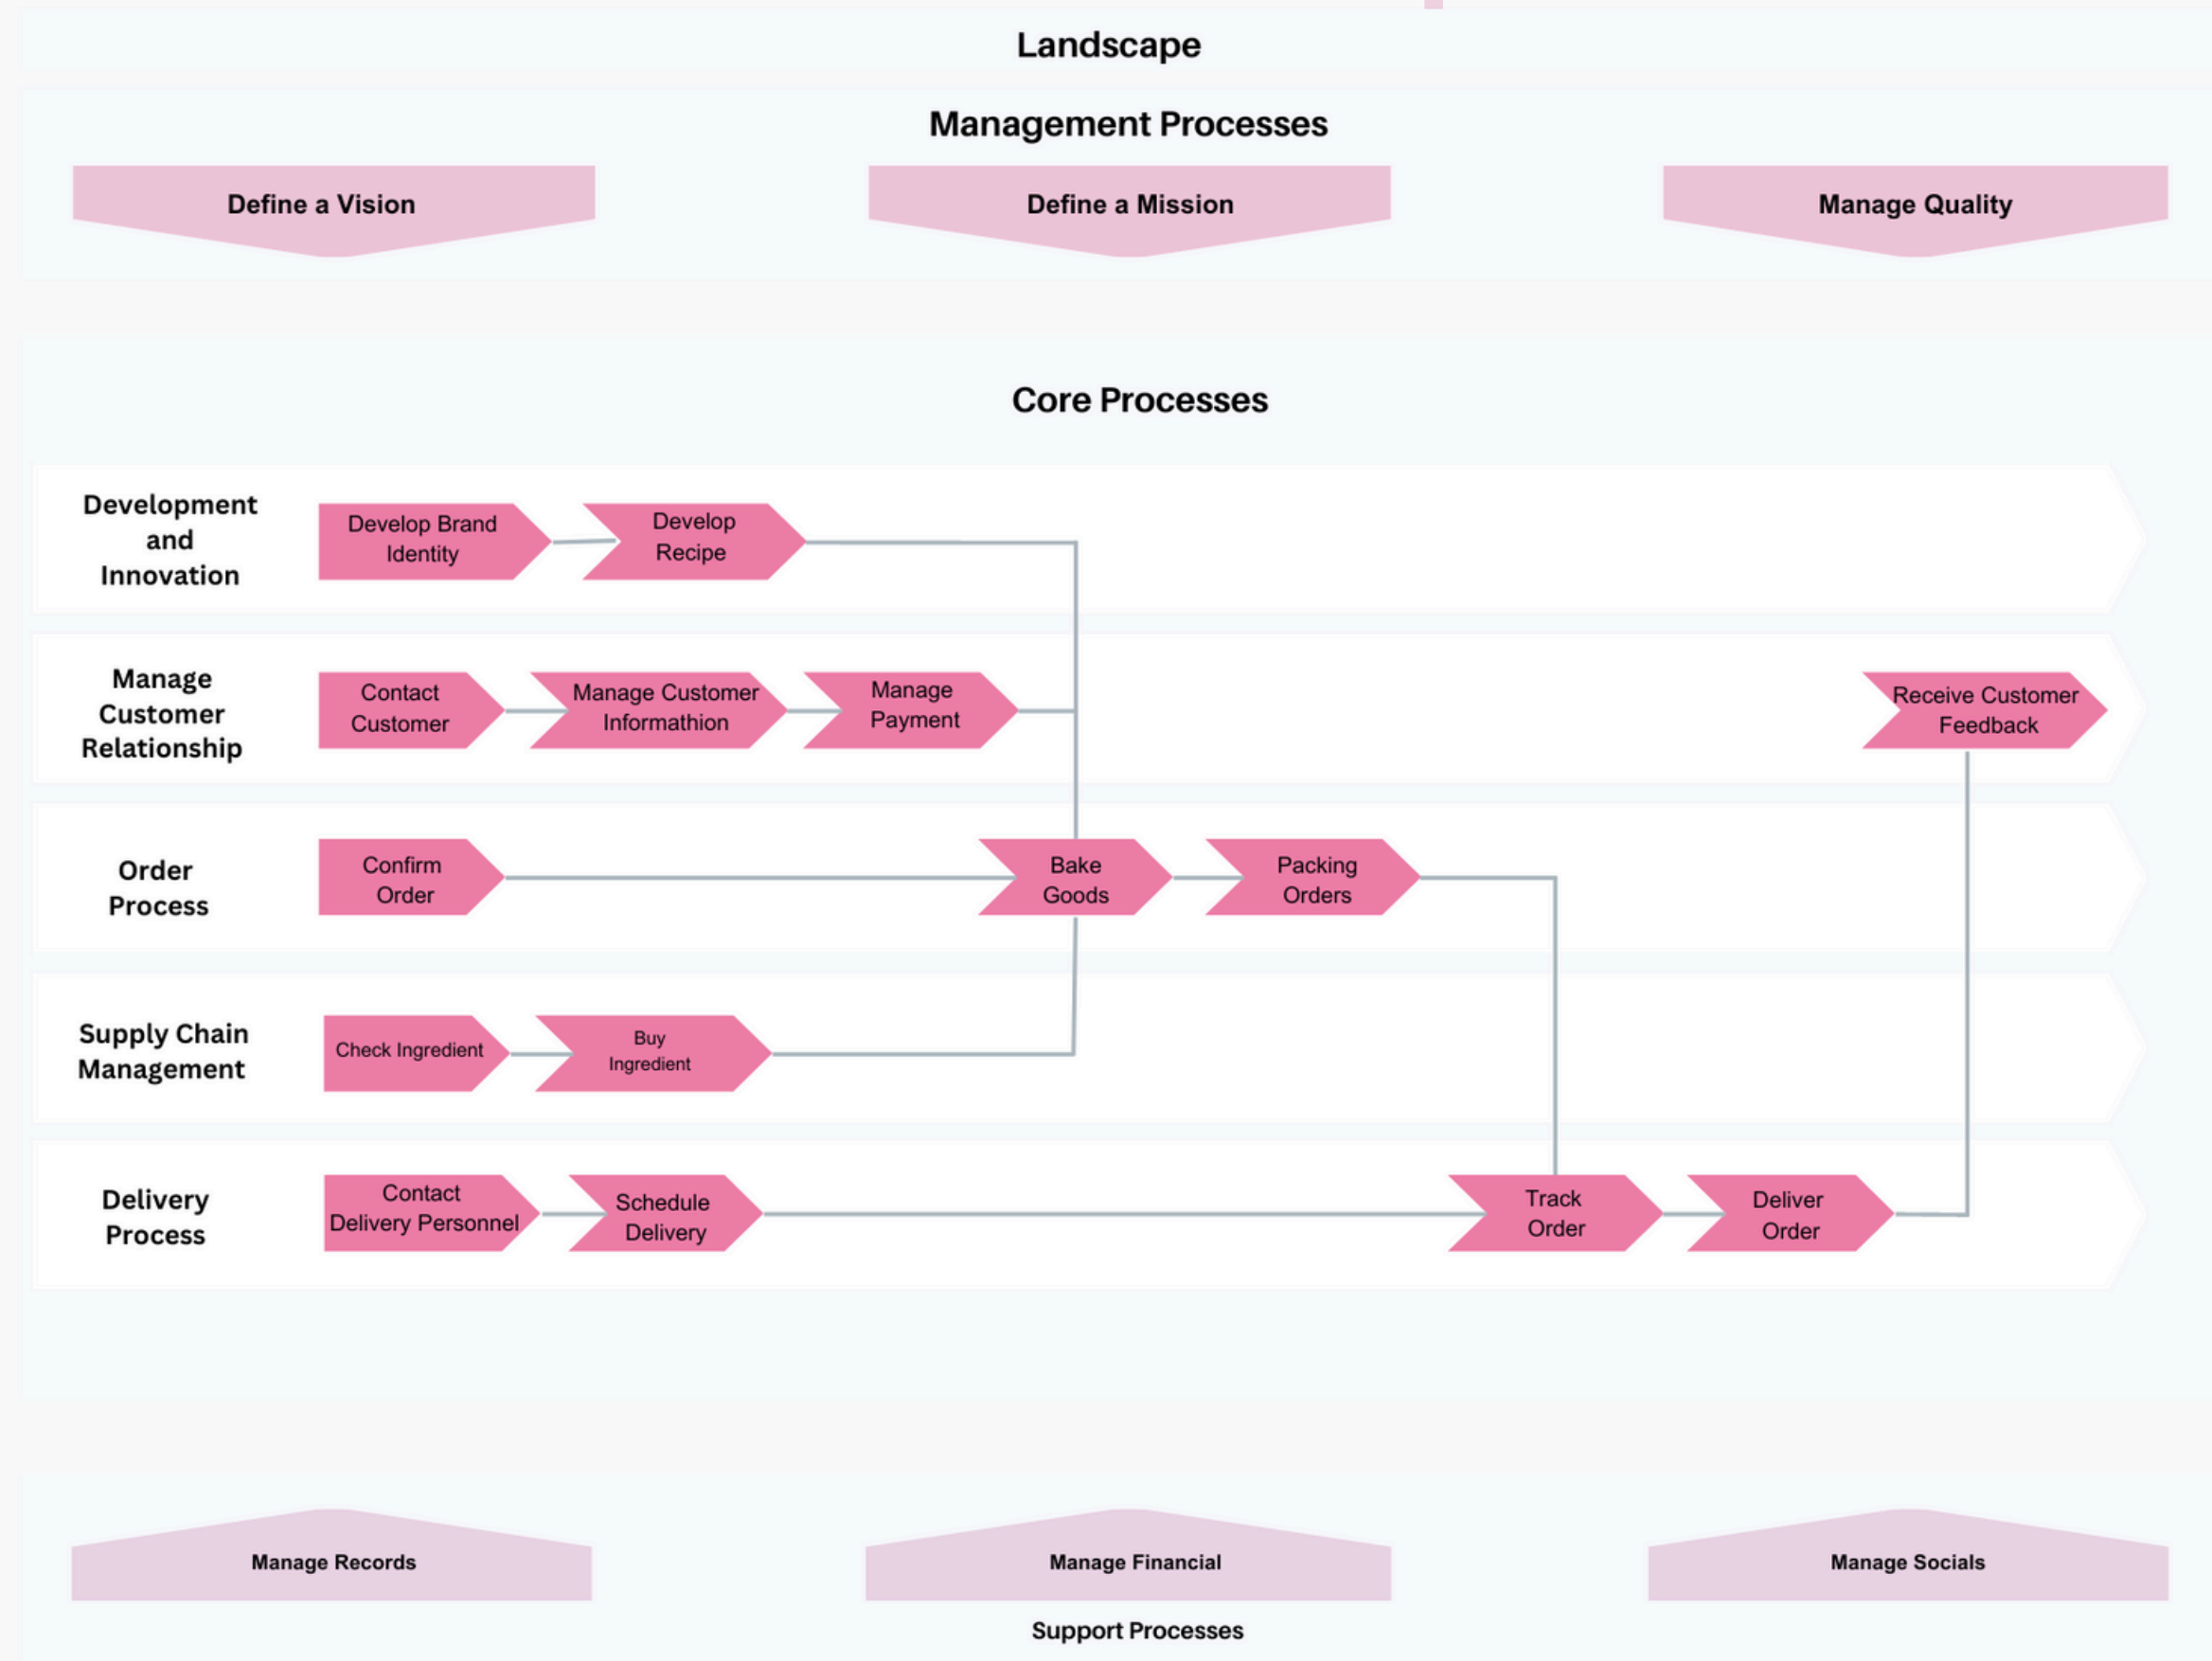

2

Define a mission

3

Manage quality

Process Landscape Model

Process Portfolio

The processes are plotted on the graph according to:

1

Strategic importance

The vision, mission,
and goals of Raa
Bakery

2

Health

Survey conducted on
customers

3

Feasibility

Resources necessary
for improvement

Strategic Importance

Following questions were asked to help narrow down process:

Alignment with business goals

Does the process align with the overall goals of the business?

Competitive advantage

Does the process give the business a competitive advantage?

Impact on the bottom line

Does the process have a positive impact on the bottom line?

Risk

Does the process involve any risks?

Health Survey

- 
- Sample size = 25
 - 5 Questions
 - Scale from 1-5 satisfaction for each issue
 - Gathered averages and converted to percentages
- 

Survey

1

On a scale from 1 - 5 how innovative and creative is Raa Bakery's product launches?

2

On a scale from 1 - 5 how satisfied are you with the customer support given from Raa Bakery?

3

On a scale from 1 - 5 how convenient is the ordering process?

4

On a scale from 1 - 5 how often do you find out products to be available?

5

On a scale from 1 - 5 rate our delivery.

Survey

Average of each response category converted to percentage:

Innovation = 3.9 = 78%

Customer Support = 3.95 = 79%

Ordering Process = 1.8 = 36%

Product Availability = 4.3 = 86%

Delivery = 3.4 = 68%

Feasibility

1

Economic Feasibility

2

Technical Feasibility

3

Social Feasibility

Process Portfolio diagram

Development and Innovation: Importance 80%, Health 78%, Feasibility 30%.

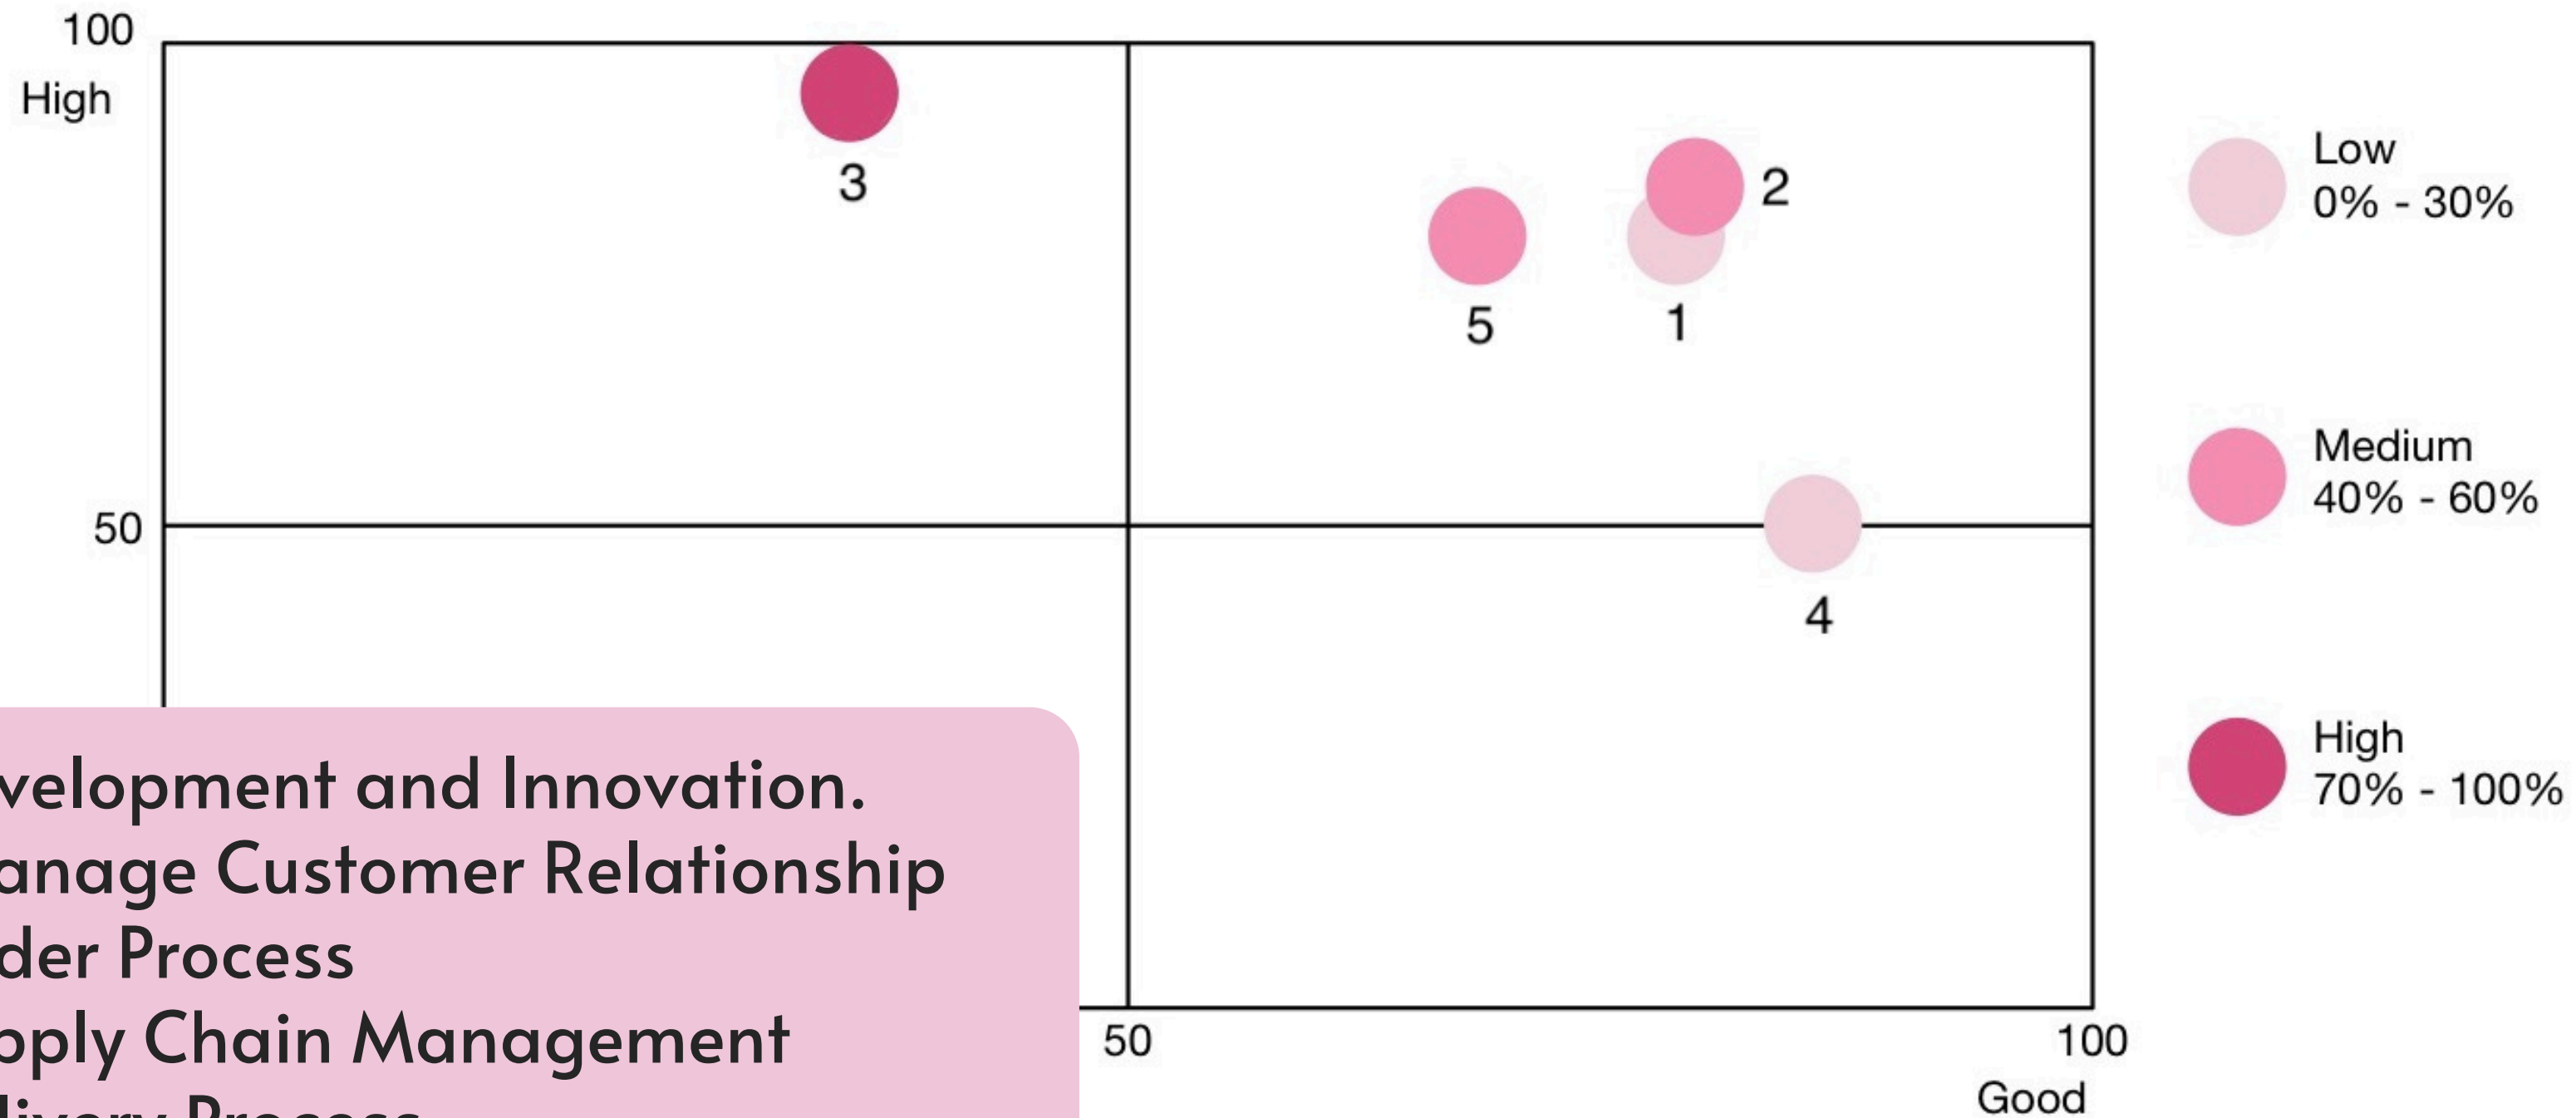

Manage Customer Relationship: Importance 85%, Health 79%, Feasibility 40%.

Order Process: Importance 95%, Health 36%, Feasibility 90%.

Supply Chain Management: Importance 50%, Health 86%, Feasibility 20%.

Delivery Process: Importance 80%, Health 68%, Feasibility 60%.

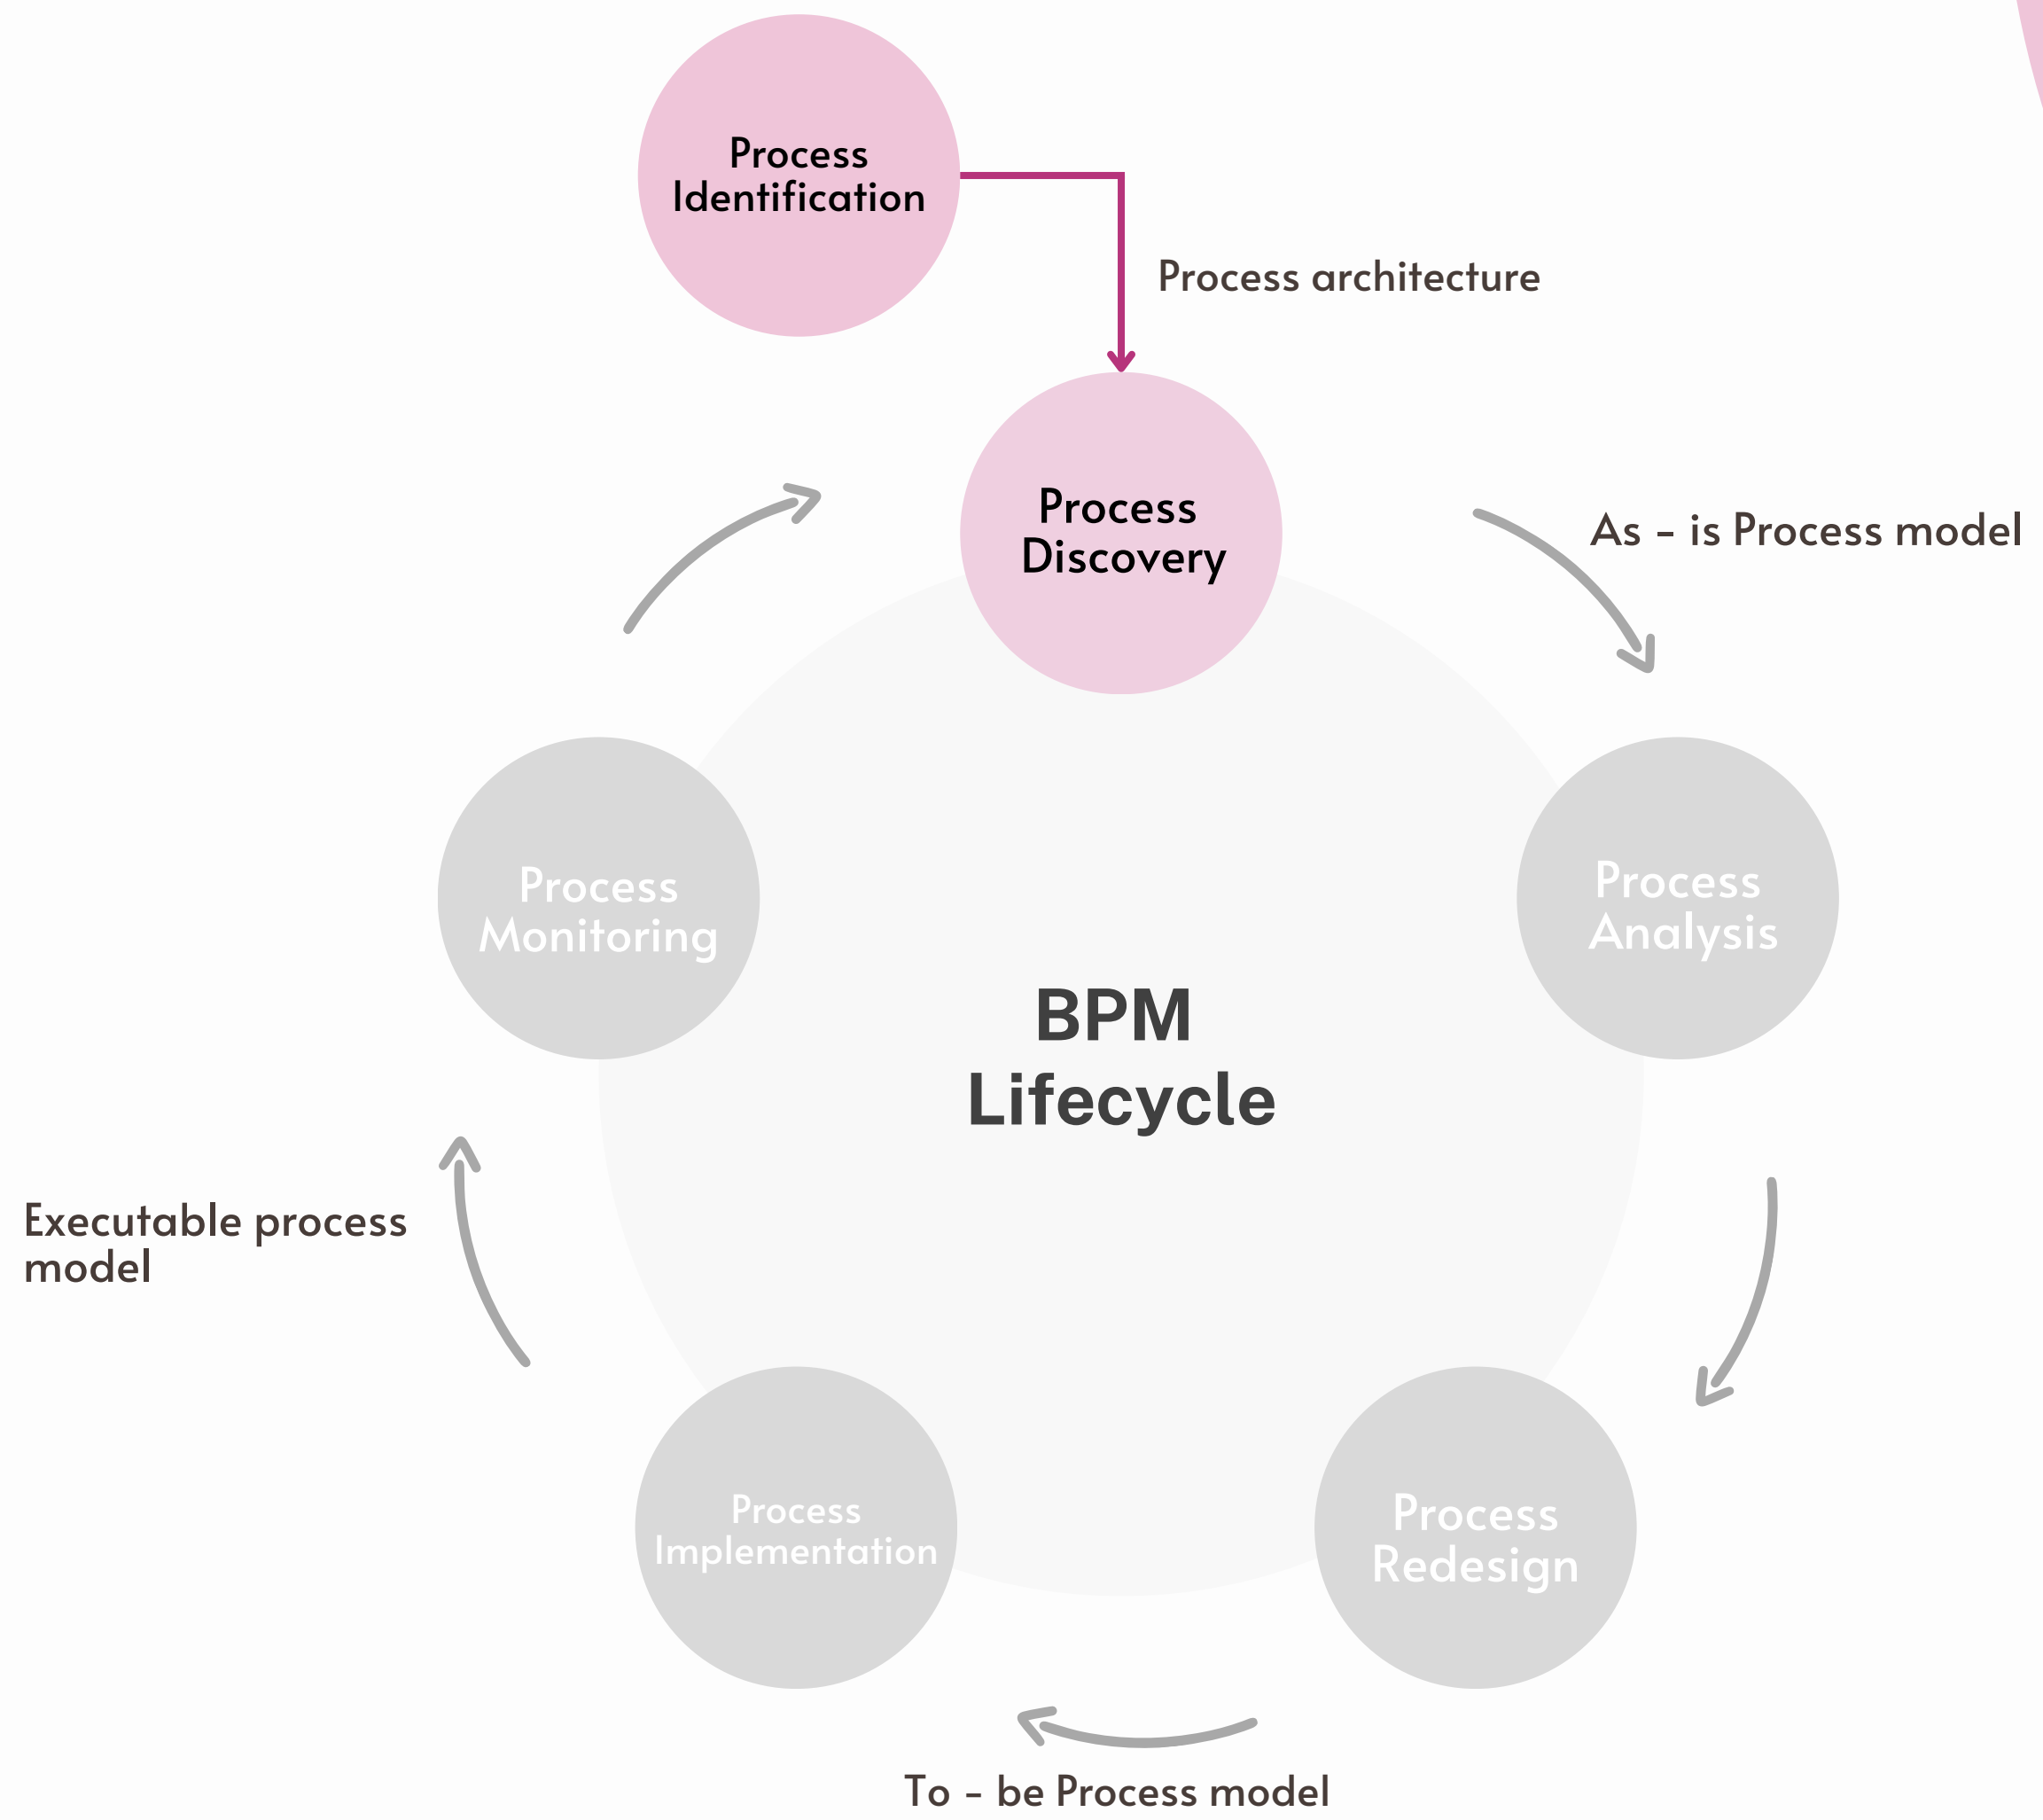

Process Portfolio diagram

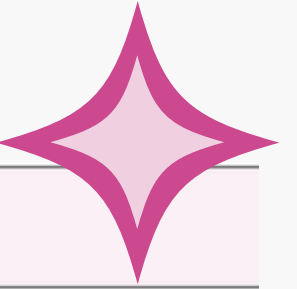

1. Development and Innovation.
2. Manage Customer Relationship
3. Order Process
4. Supply Chain Management
5. Delivery Process

Process Discovery

Flow Analysis

$$\text{Cycle Time} = 15 + 20 + 29.75 + 82.35 + 45 + 100 + 120 + 170$$
$$= 702.1 \text{ mins}$$

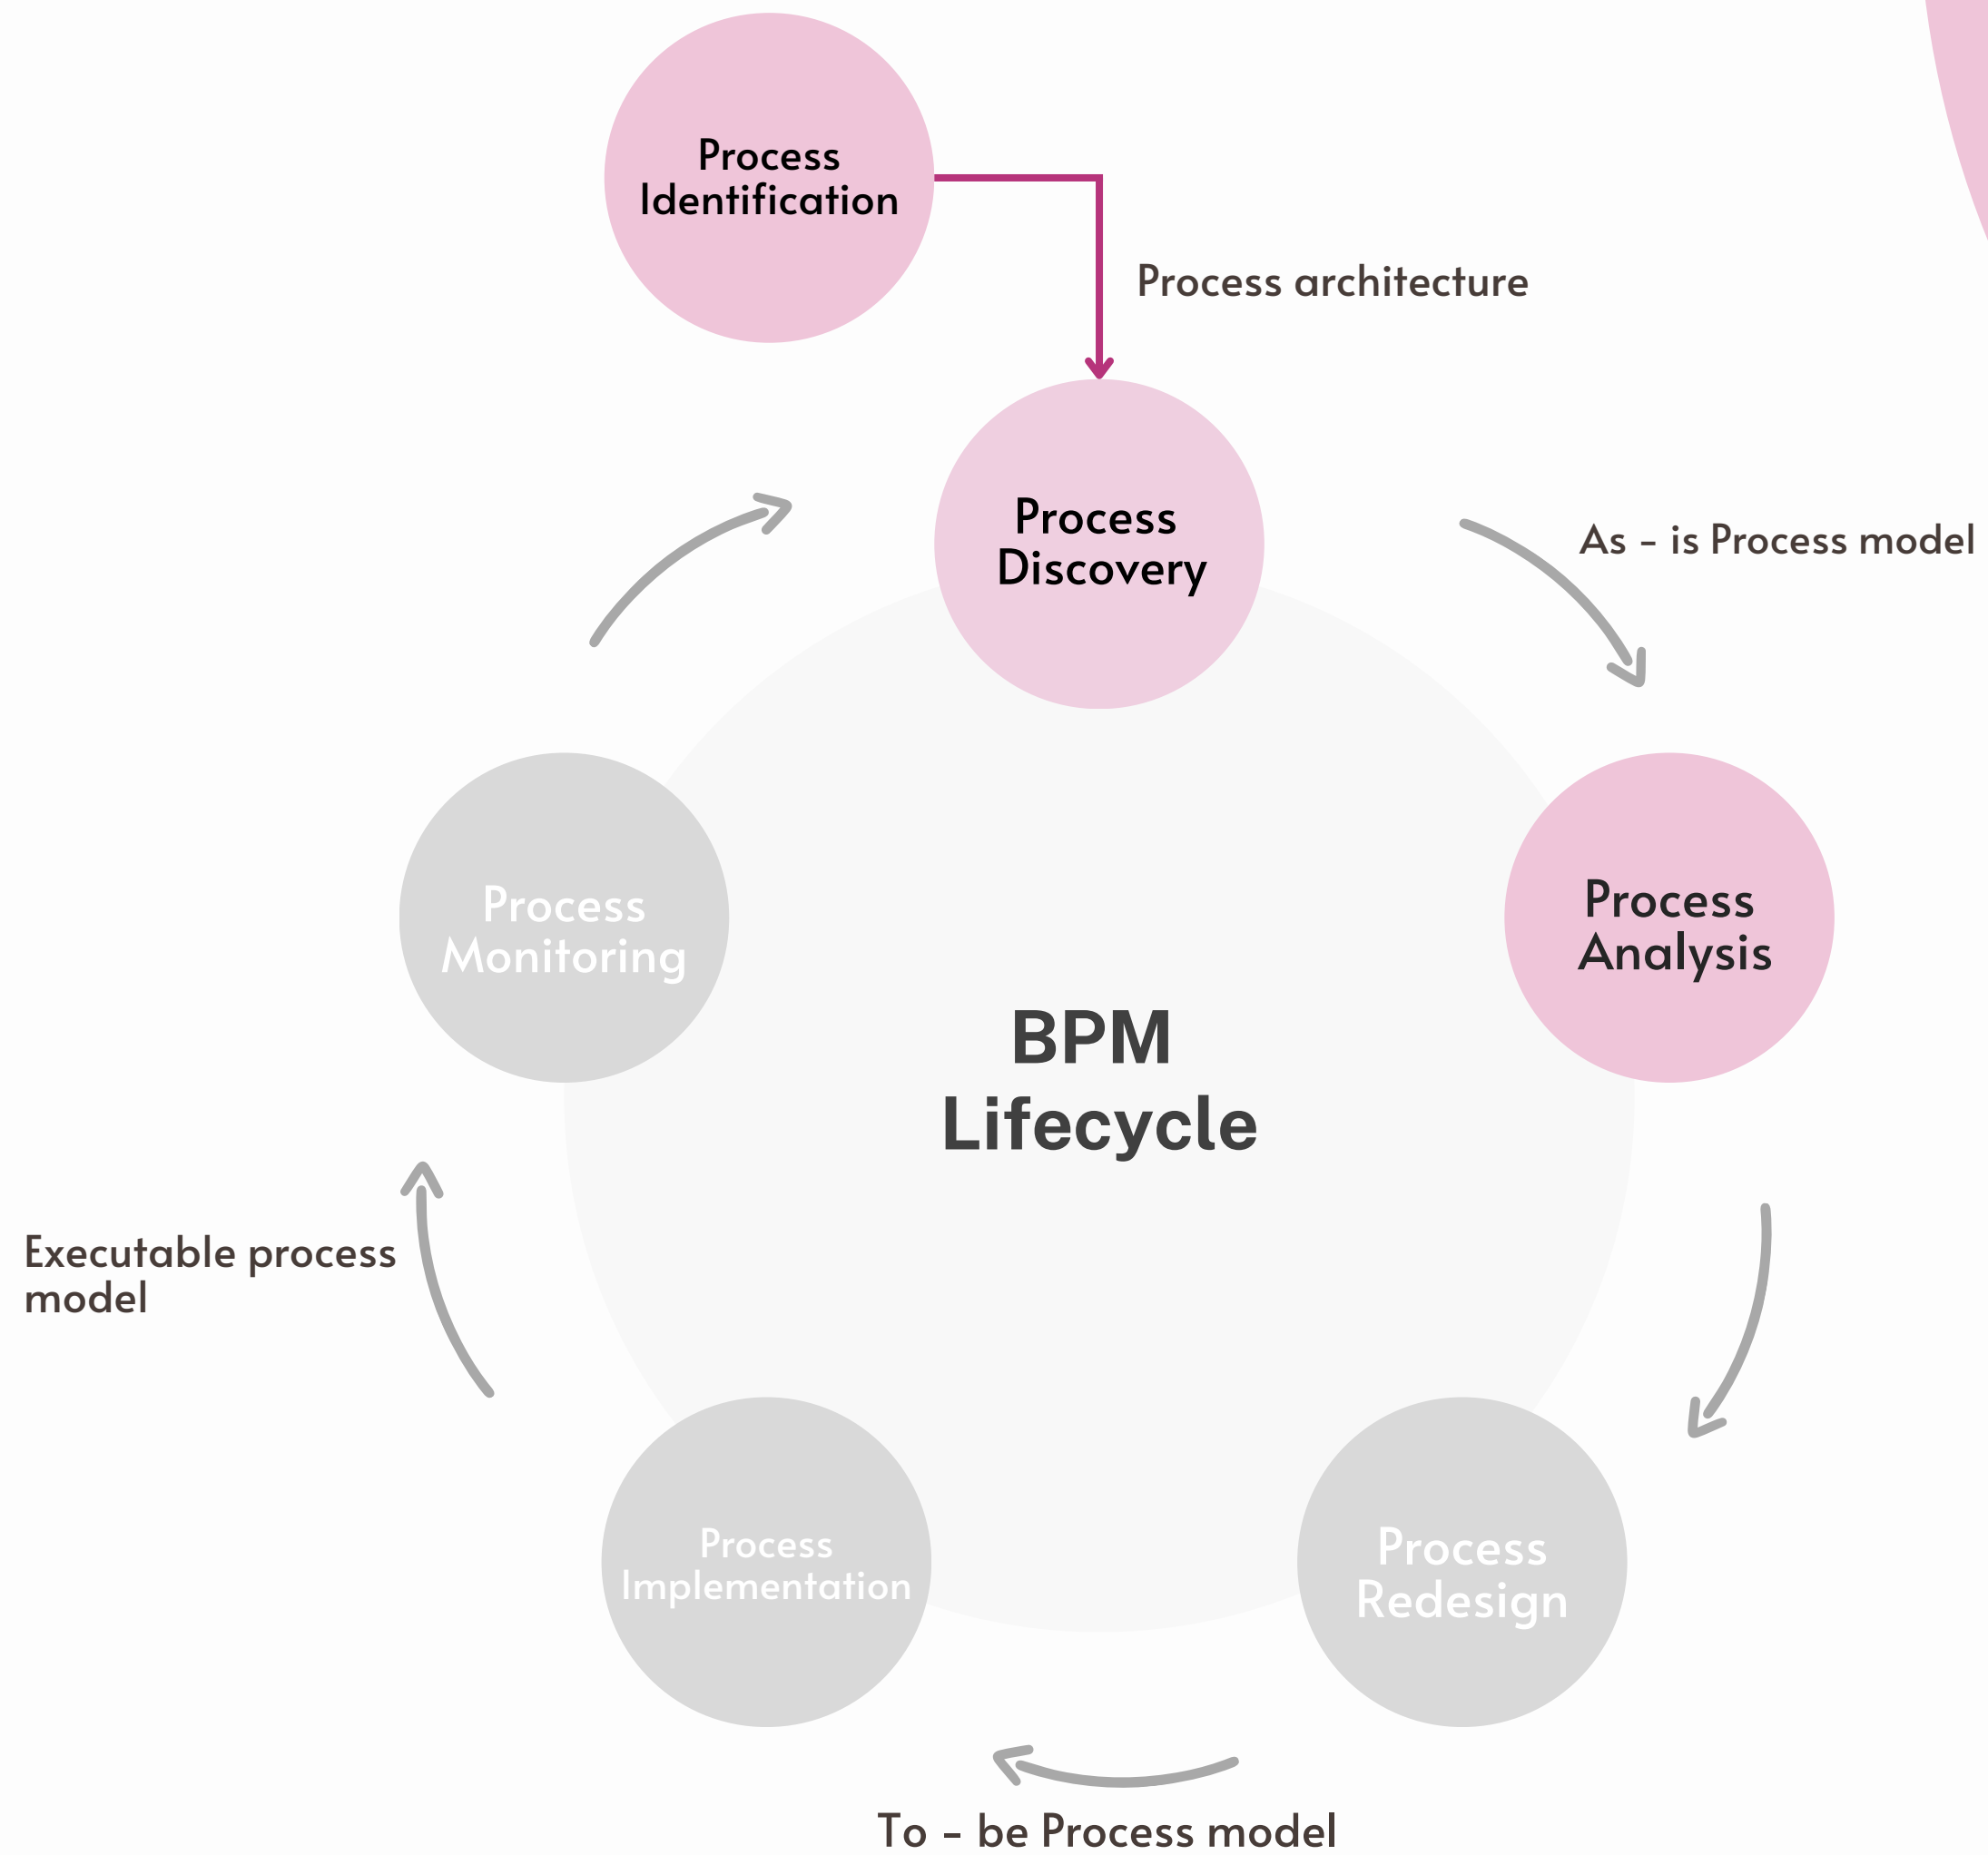

$$\text{Processing Time} = 5 + 5 + 14.75 + 23.53 + 20 + 30 + 35 + 65 + 25$$
$$= 223.28 \text{ mins}$$

$$\text{Cycle Time Efficiency} = \text{Processing Time} / \text{Cycle Time}$$

$$223.28 \text{ mins} / 702.1 \text{ mins} = 0.3180 * 100$$
$$= 31.80\%$$

Process Analysis

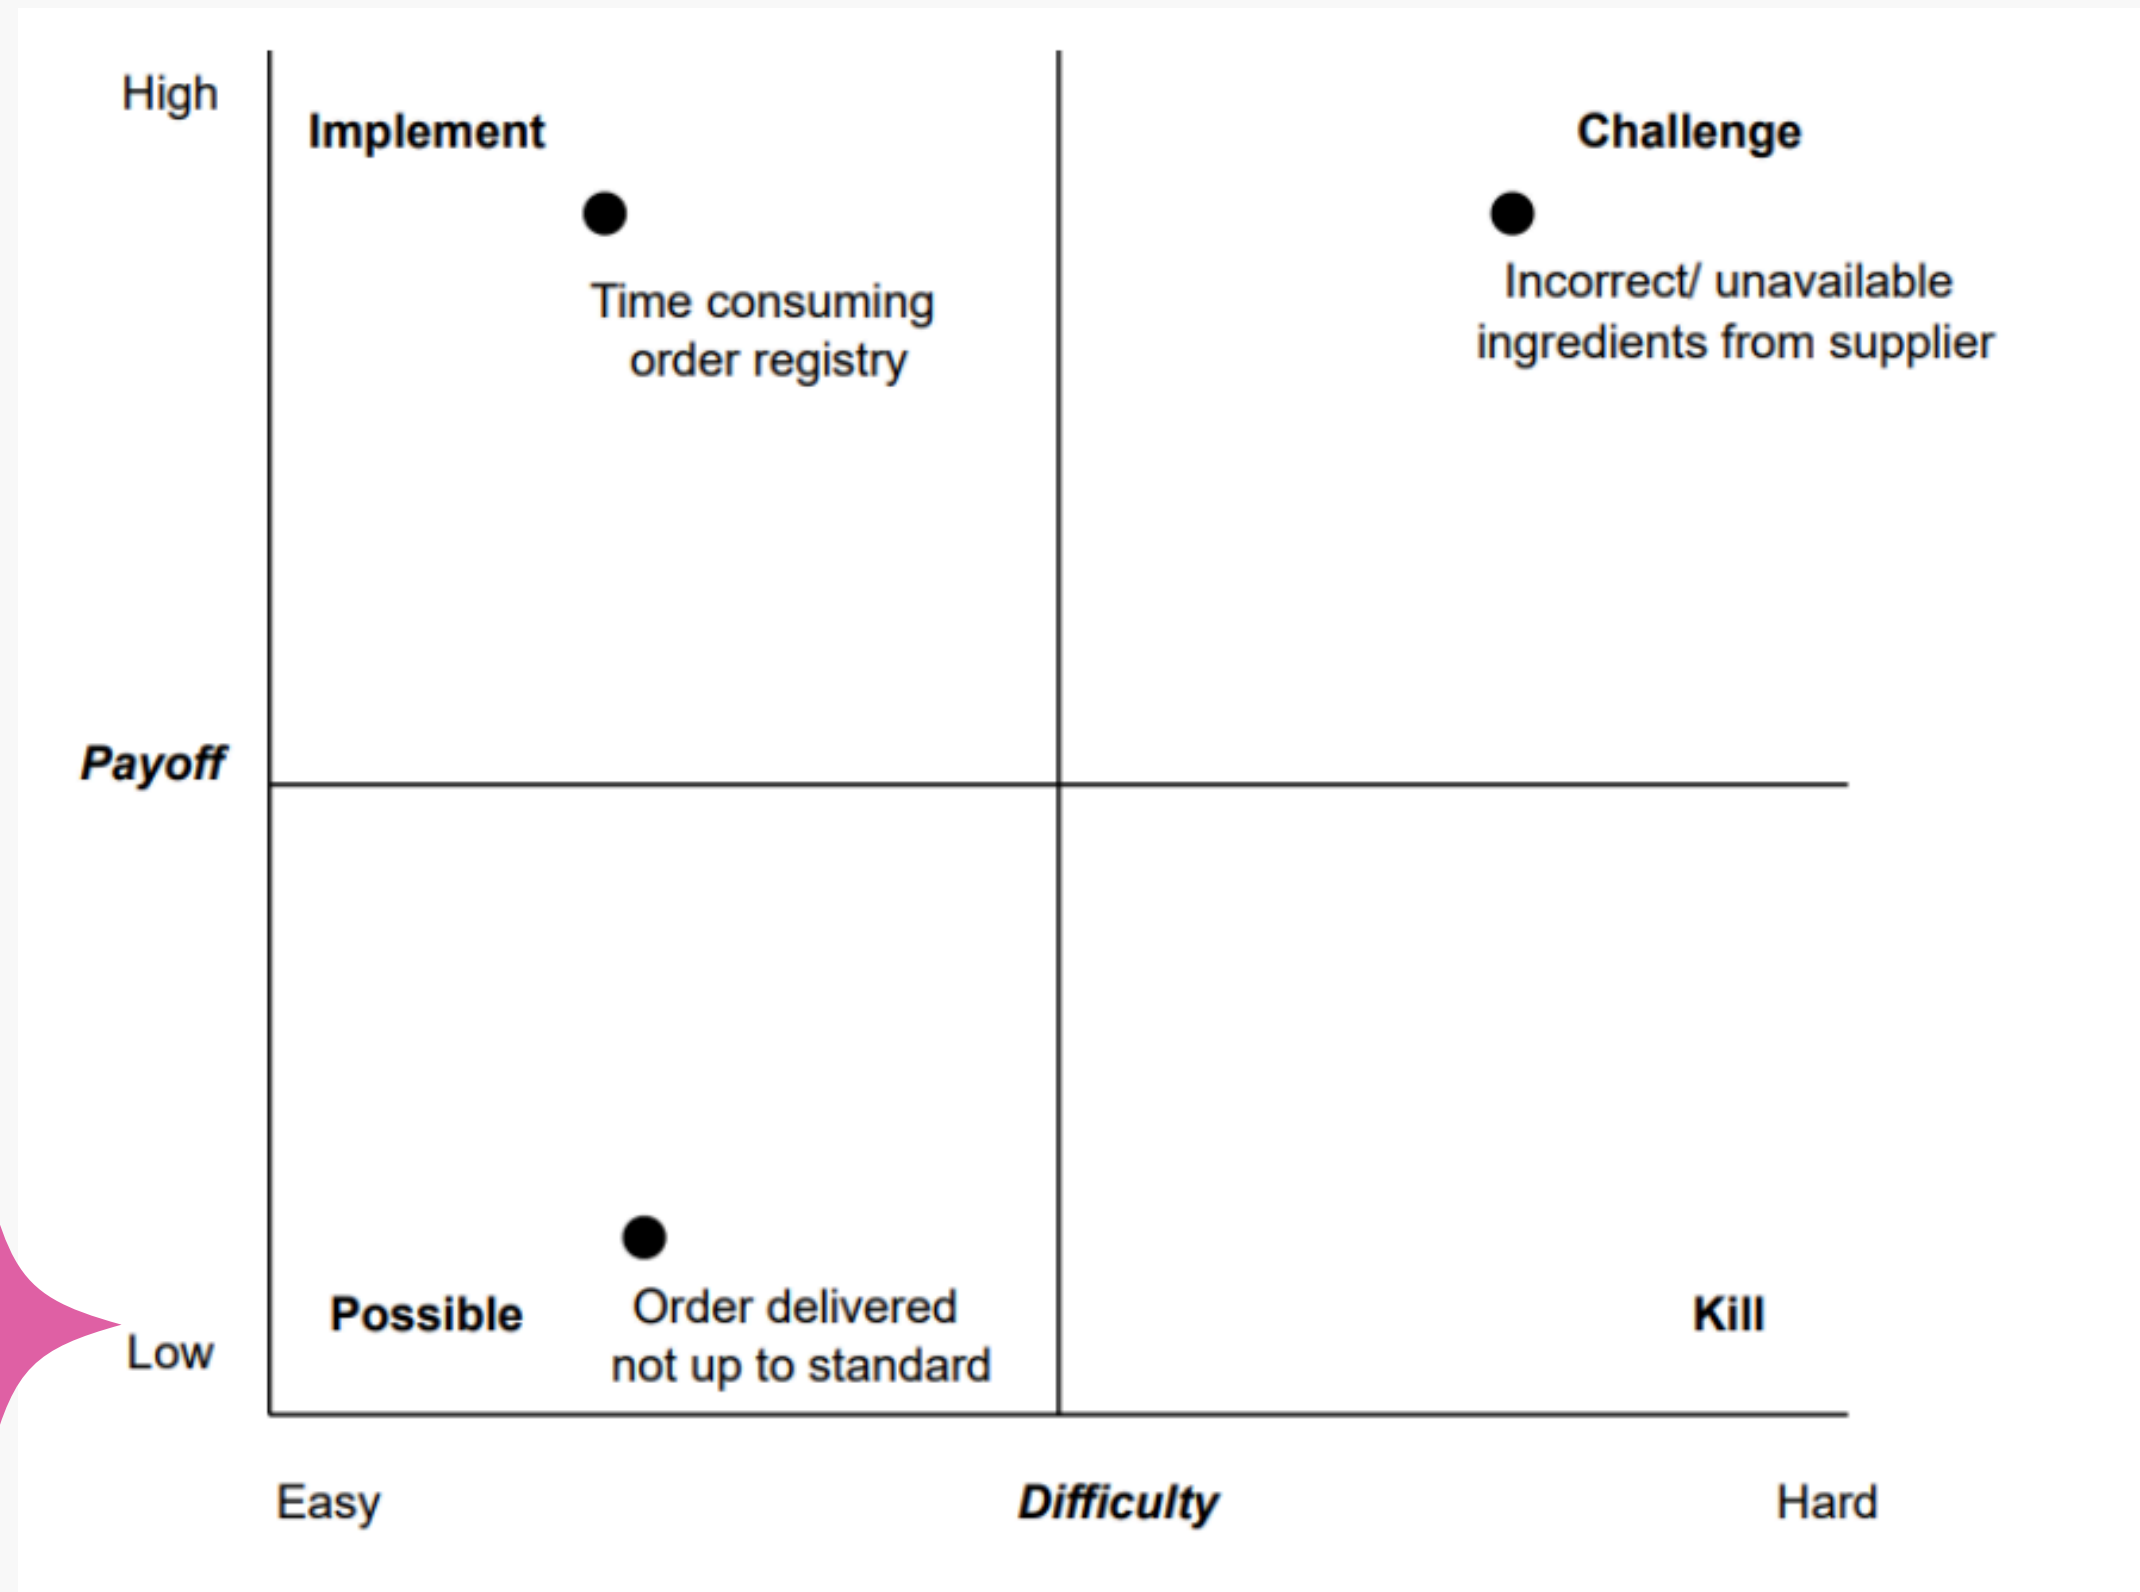

Issue Register Table

Name	Explanation	Assumptions	Qualitative Impact	Quantitative Impact
Time consuming order registry	Time from customer message to order registry is long	40% of 10 orders took longer than 2 hours	- Customer dissatisfaction - Delay in process	$(2.1 + 1.5 + 0.75 + 1.3 + 2 + 0.5 + 2.6 + 3.2 + 0.2 + 1.4) / 10 = 1.56 \text{ hrs}$
Incorrect/unavailable ingredients from supplier	Ingredients out of stock/ supplier delivers wrong items	20% of 10 orders from supplier wrong/unavailable	Mistrust and lack of loyalty to supplier	$0.2 * 10 = 2 \text{ out of } 10 \text{ orders}$
Order delivered not up to standard	Customers receive orders not in the best condition	4% of 50 orders were delivered faulty	- Negative experience - Poor reputation	$0.04 * 50 = 2 \text{ out of } 50 \text{ orders}$

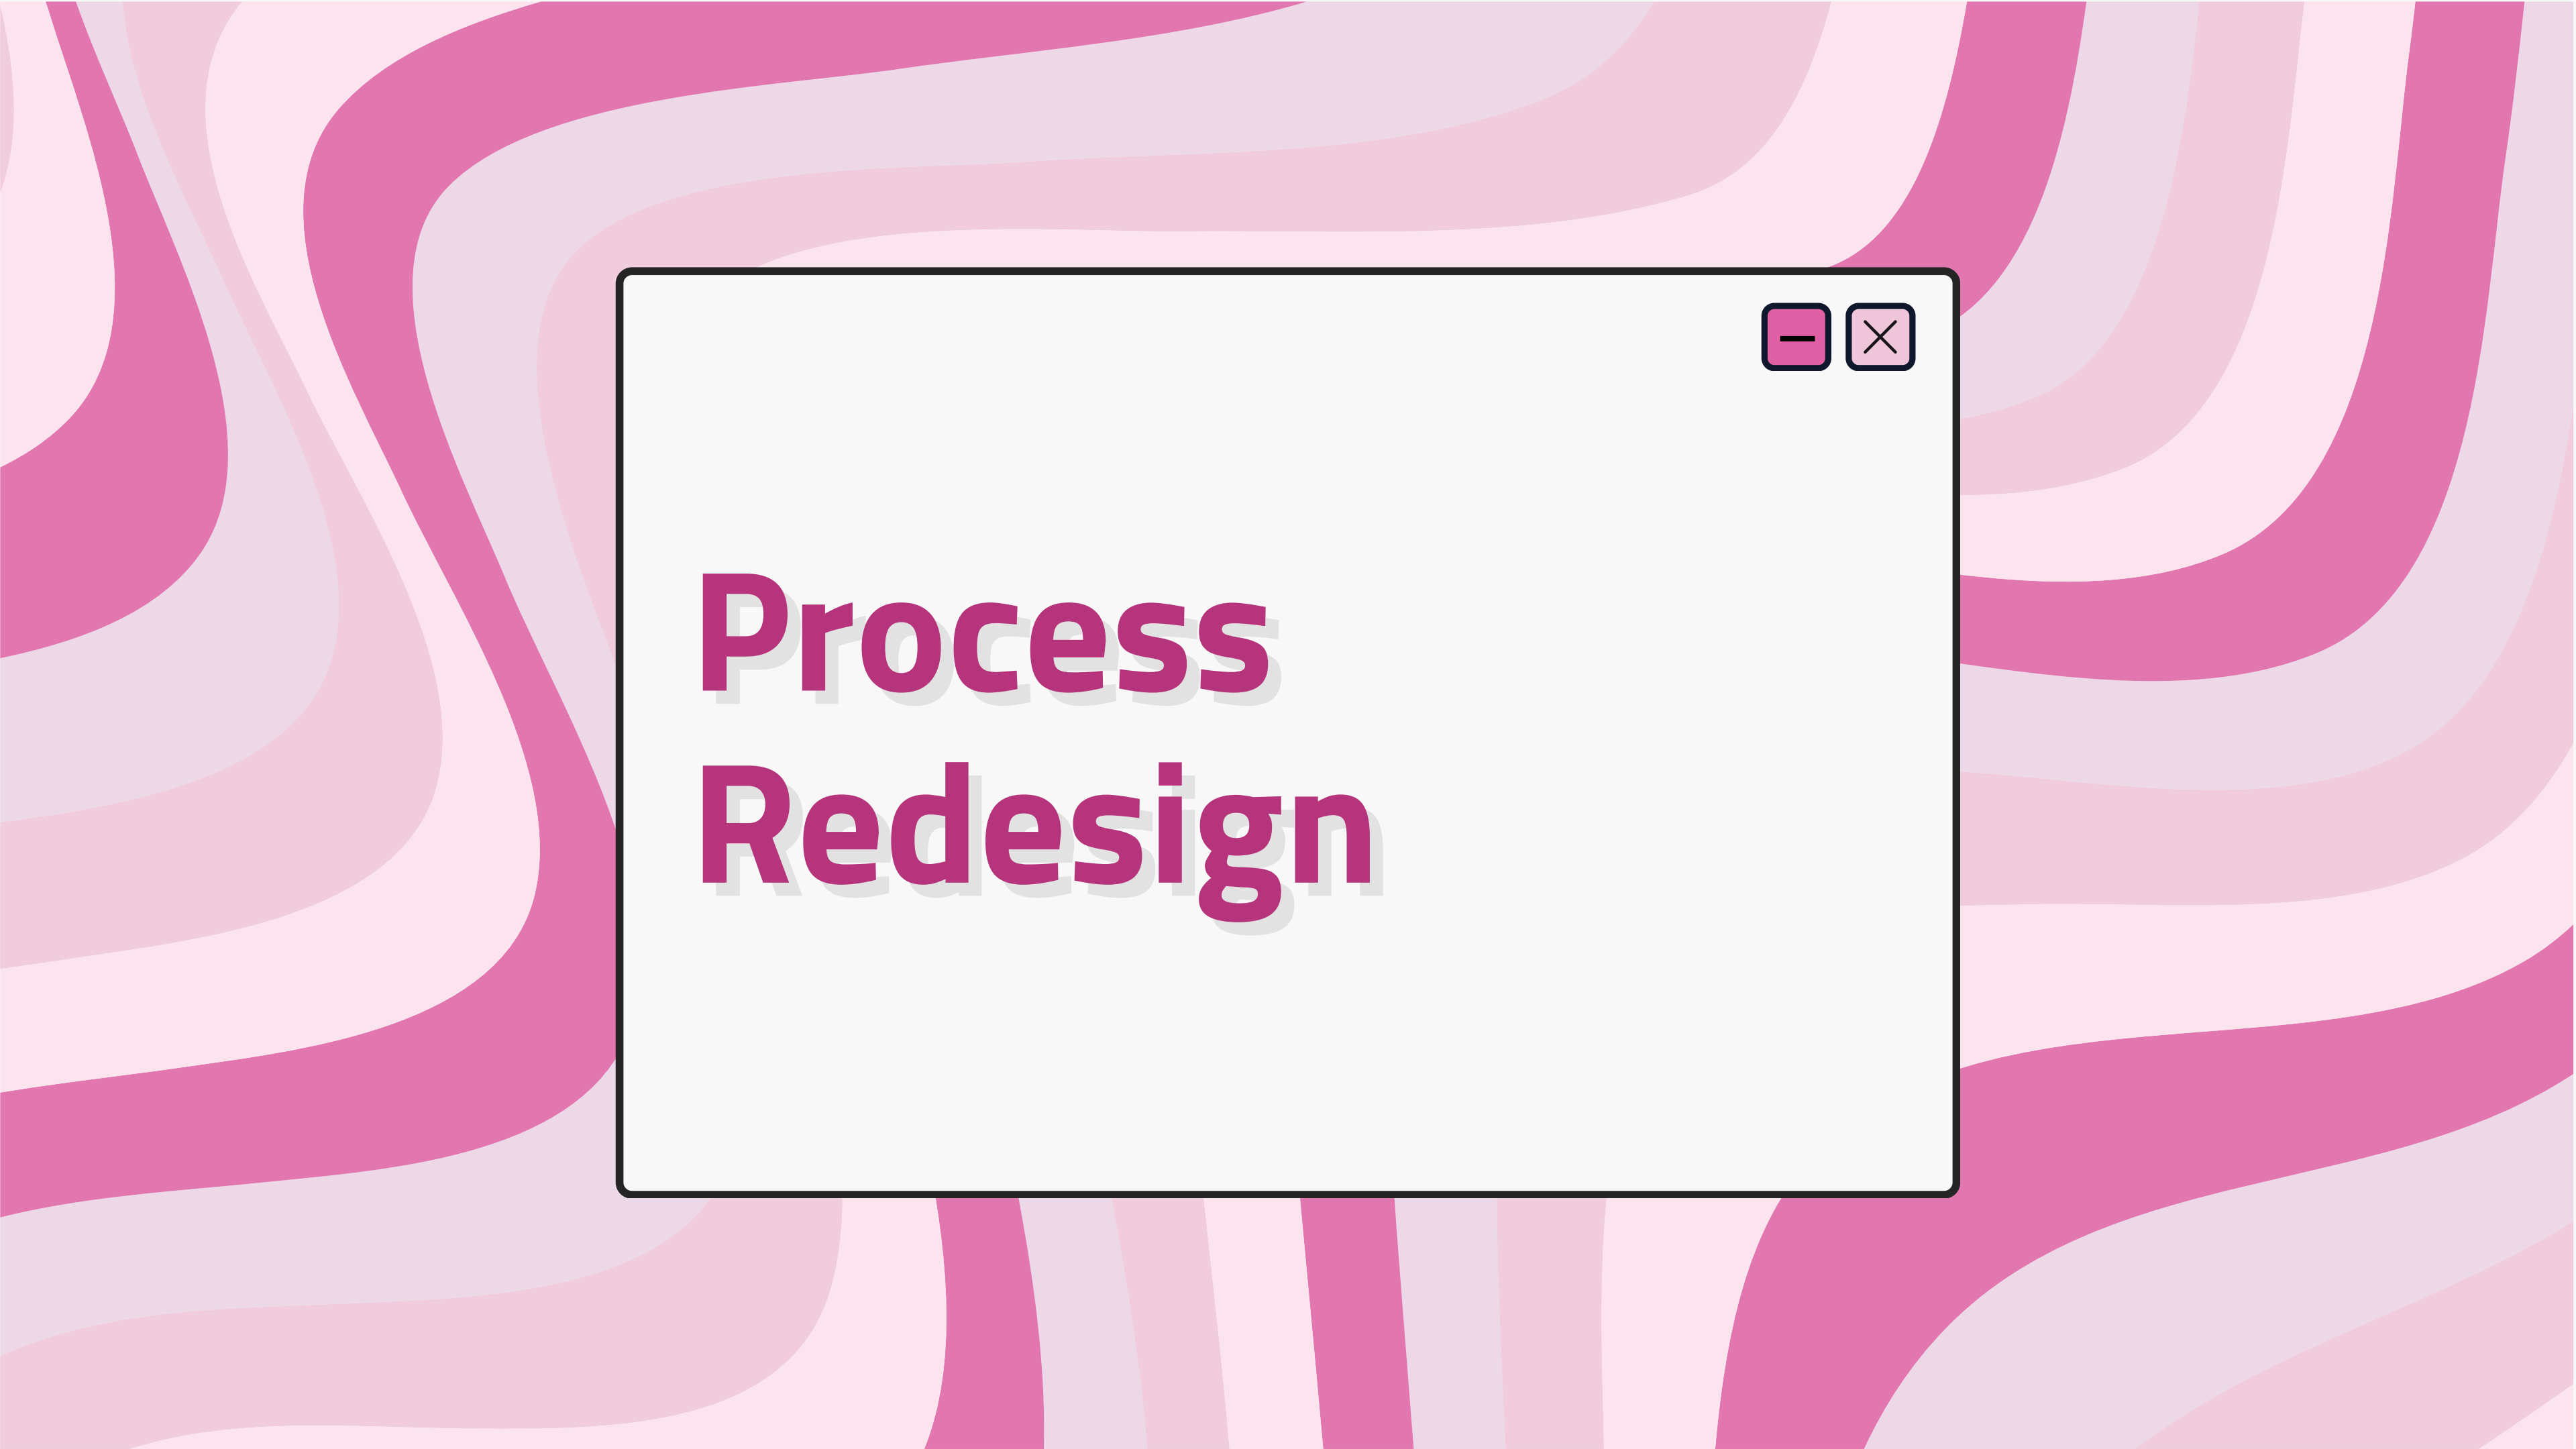

PICK chart

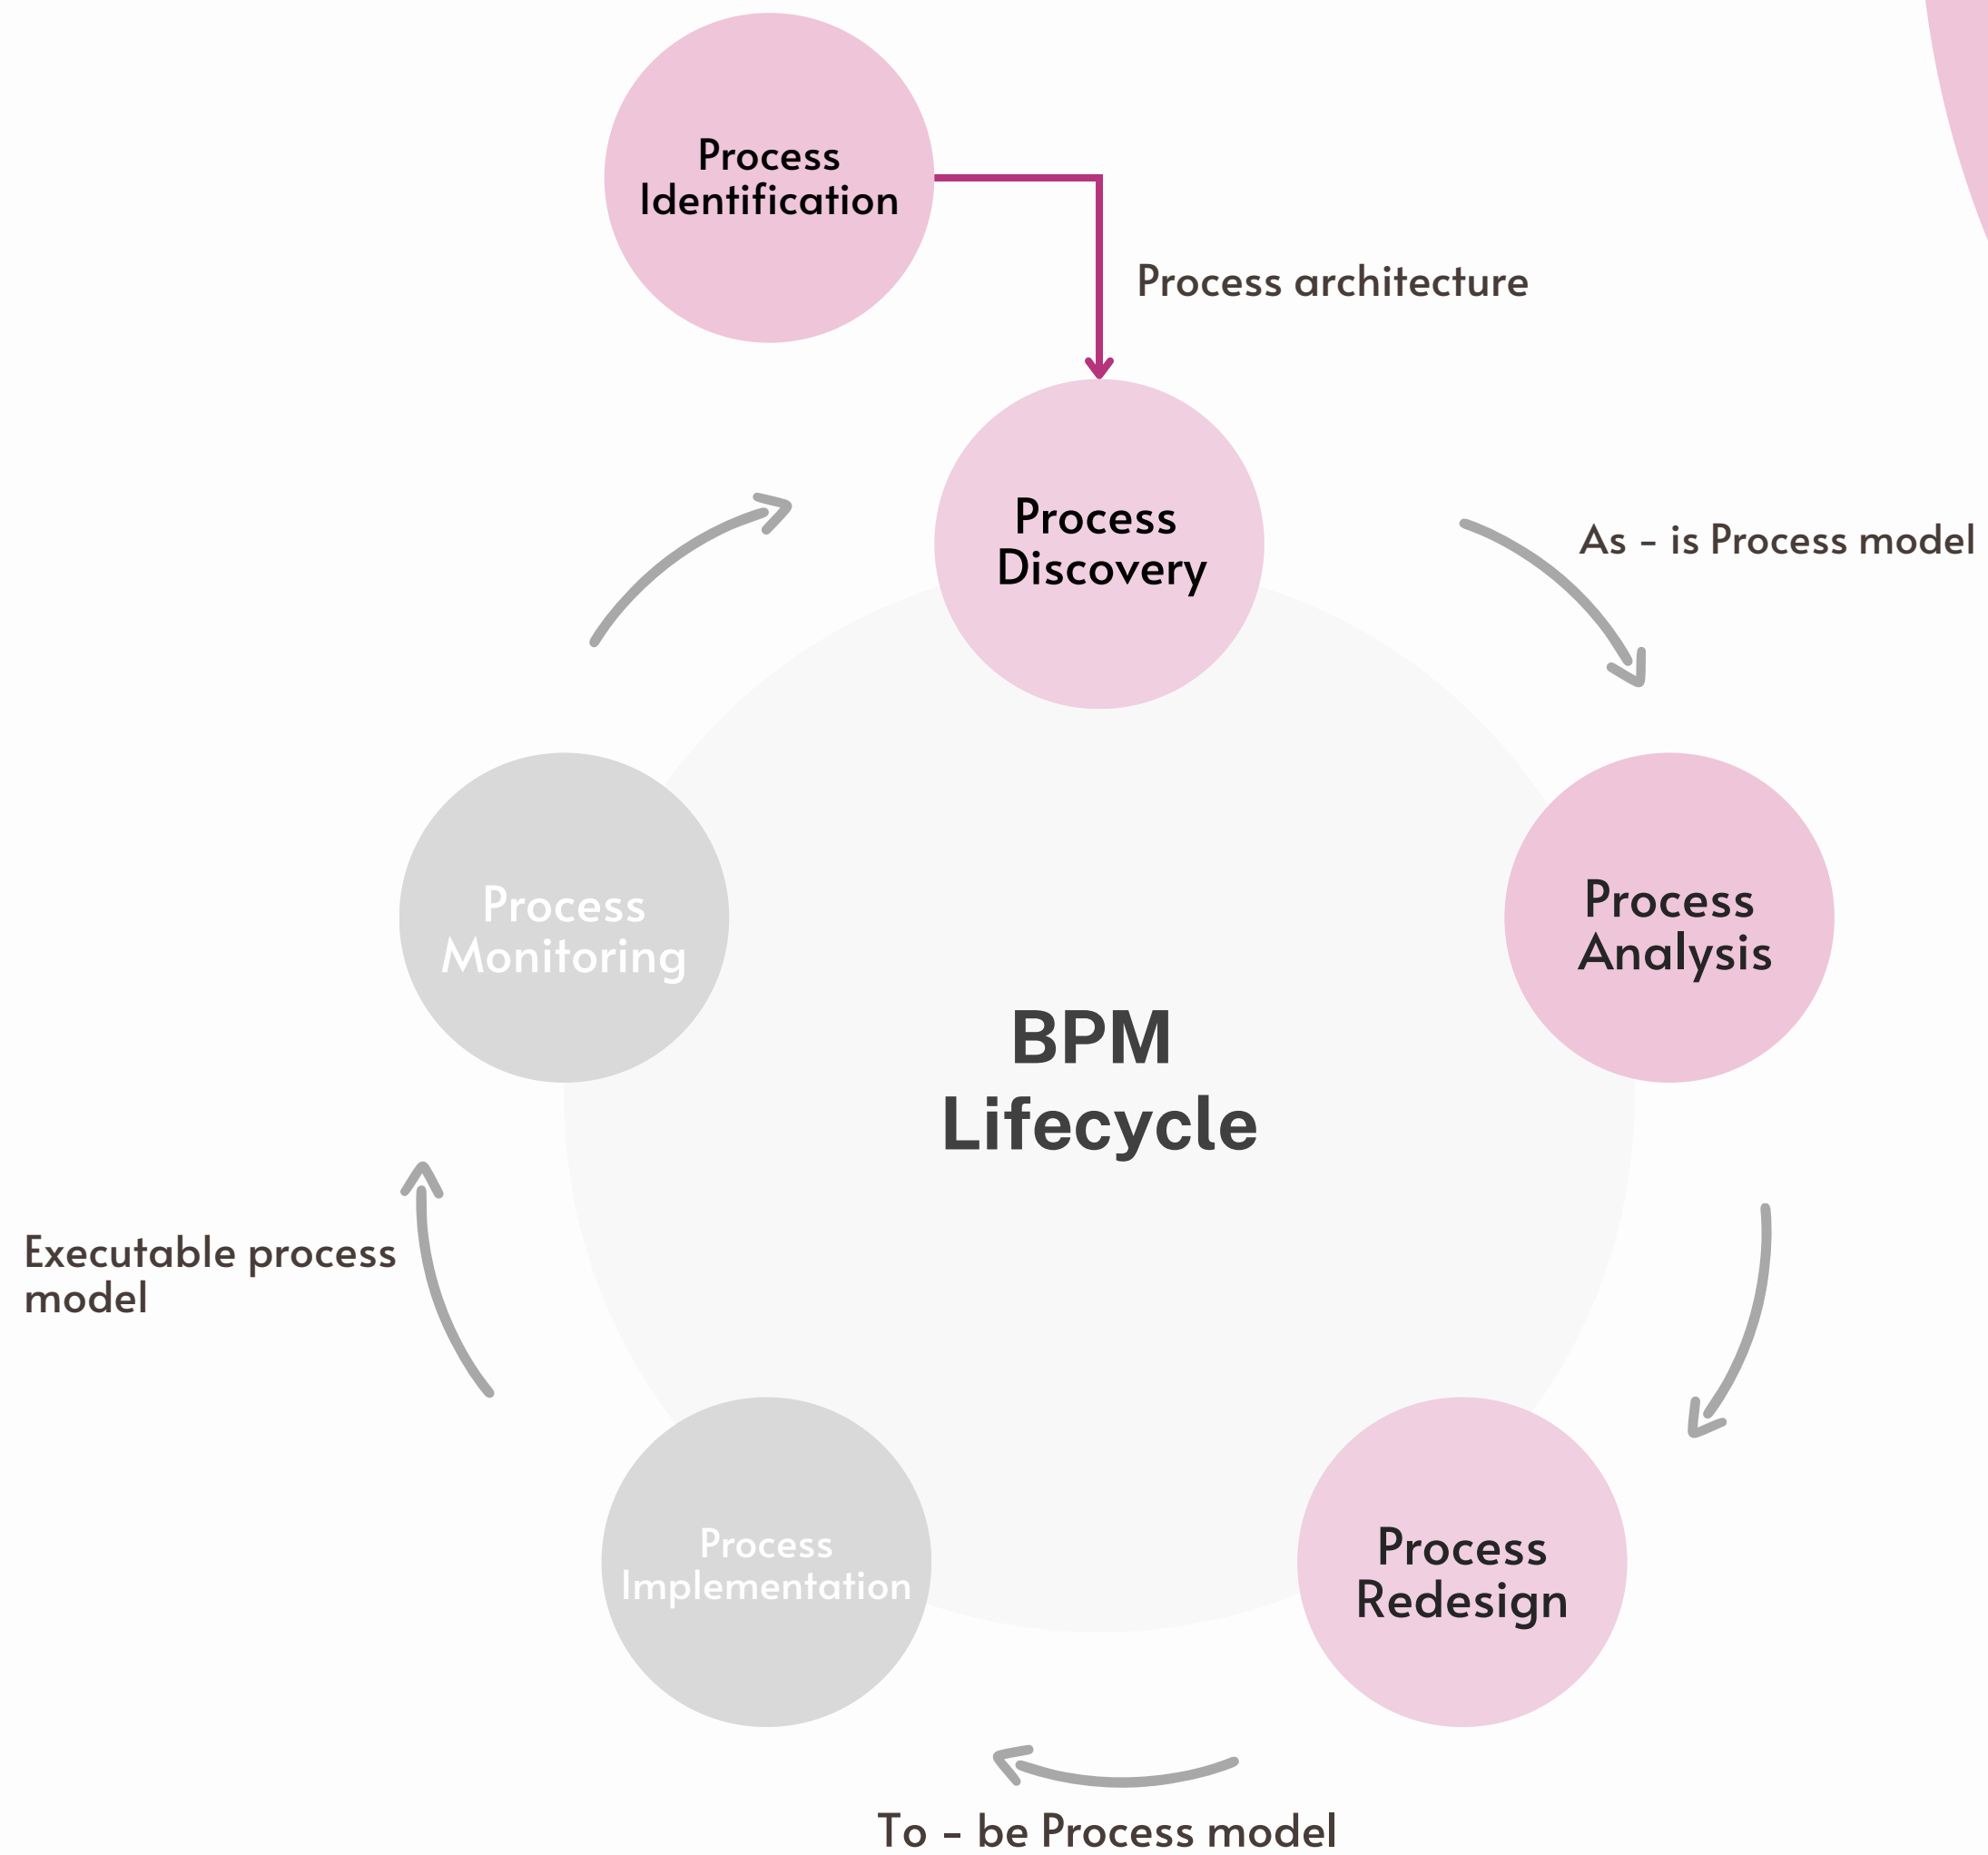

Time consuming order registry

5 Whys

- 1 Why is the order registry time consuming?
Because it is a manual process.
- 2 Why is it a manual process?
Because Rawan is responding to each customer individually.
- 3 Why is she responding to each customer individually?
Because she needs to make sure of the response quality of each message case.
- 4 Why does she need to ensure the response quality ?
Because there is more than one platform customers are sending messages on.
- 5 Why are there multiple platforms for customer messaging?
Because there is a lack of a specific platform/ system placed for orders.

Process Redesign

To-be Description

1

Task Elimination:
"Centralized message platform"

2

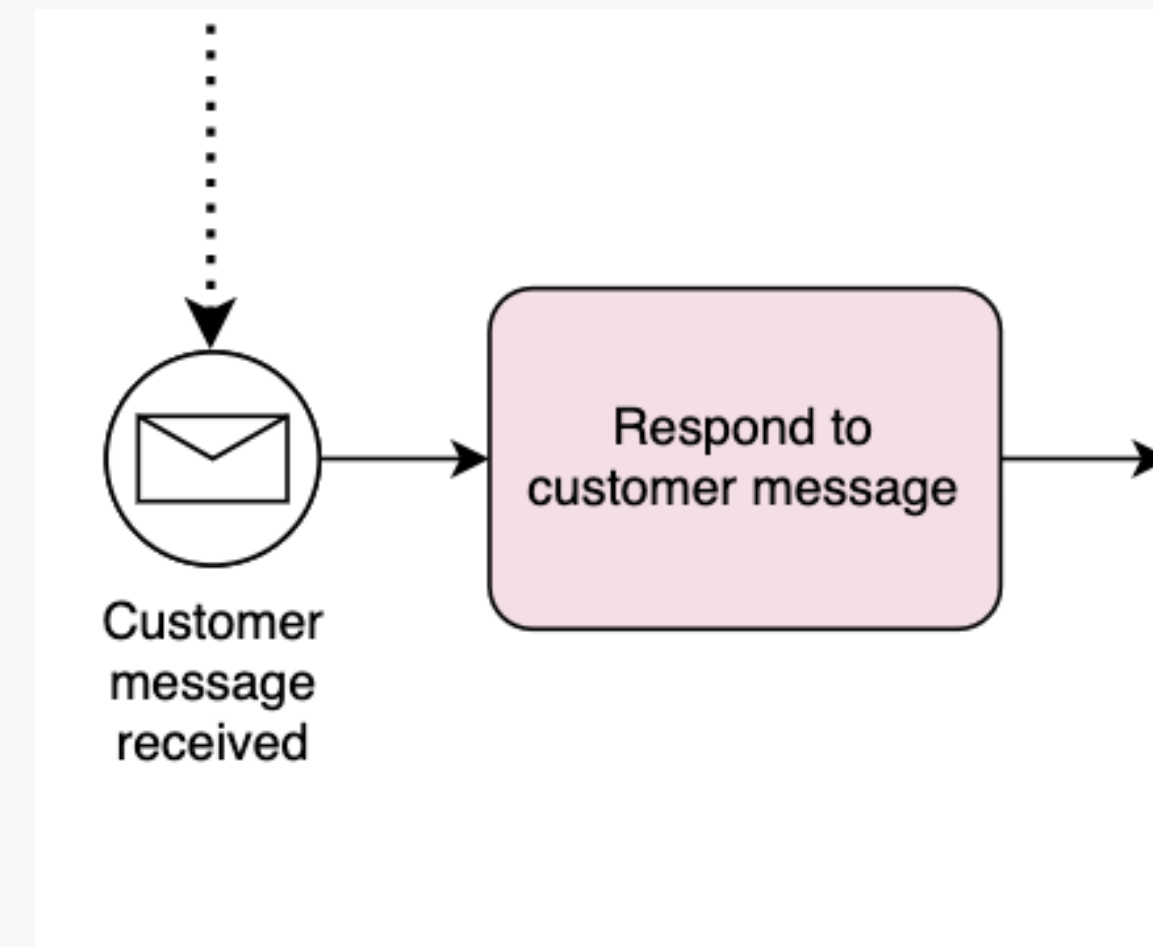

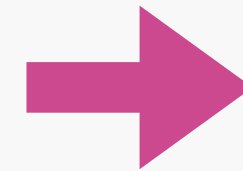

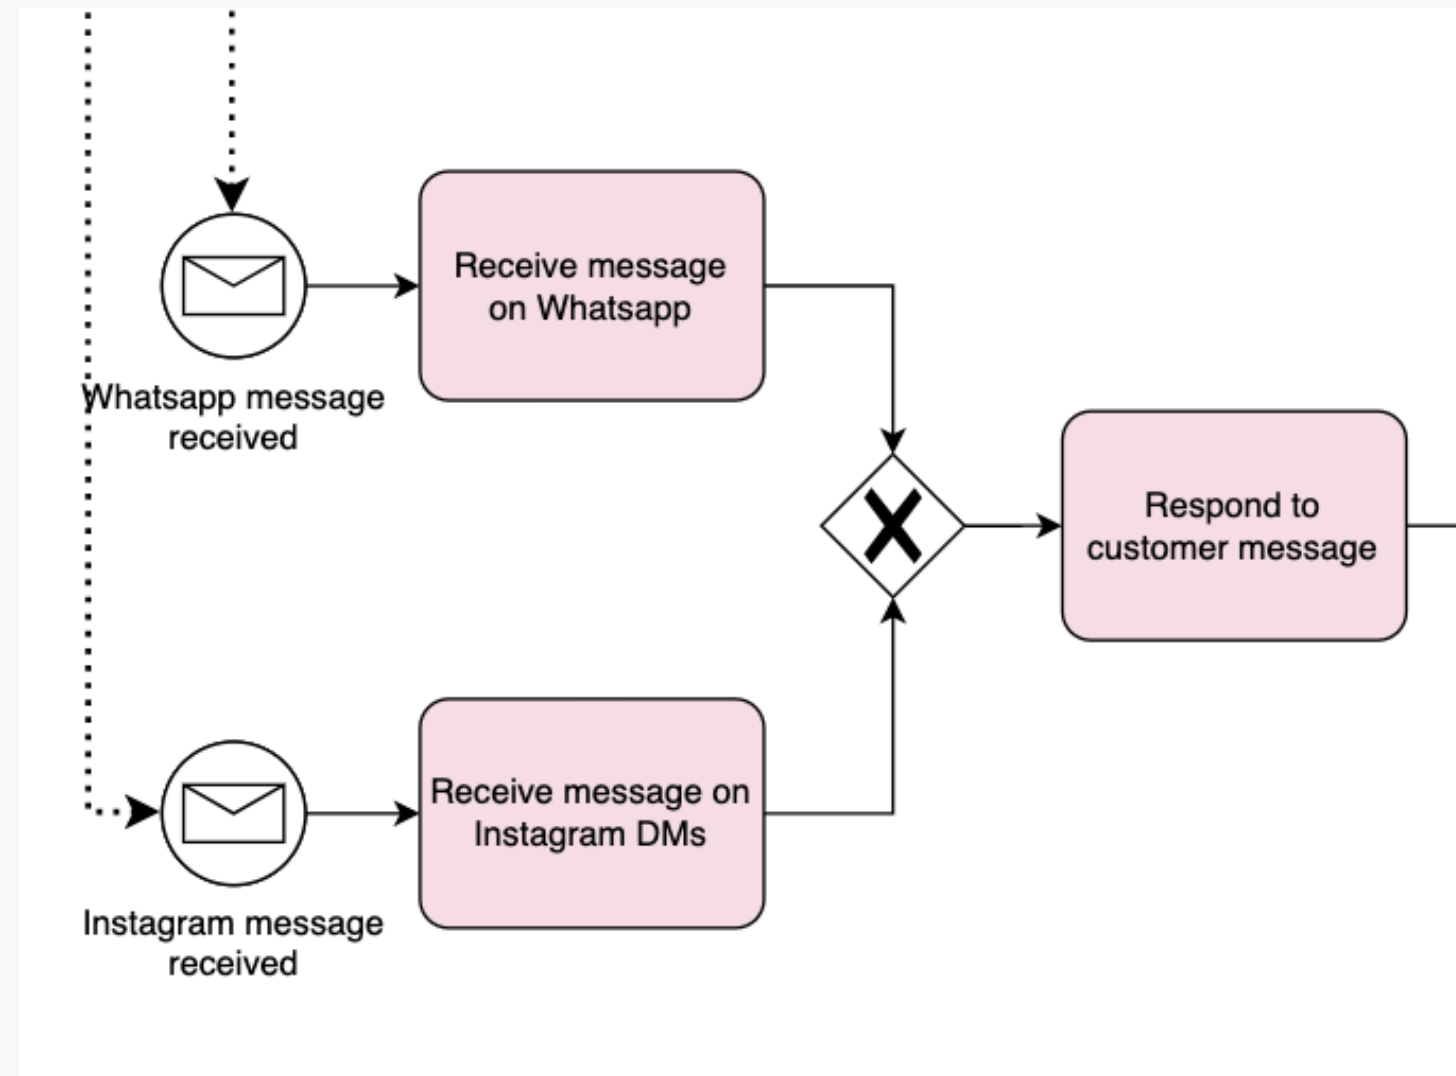

Task Composition:
"Bake Goods" & "Follow up with customer"

3

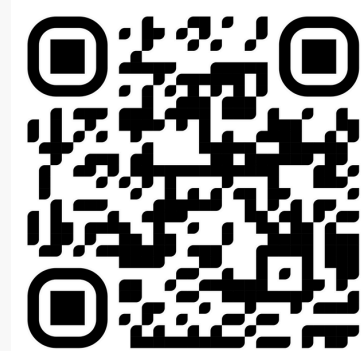

Parallelizing:
Register customer order + issue invoice & send
customer notification + get shipping info

I. Task Elimination

Centralized message platform

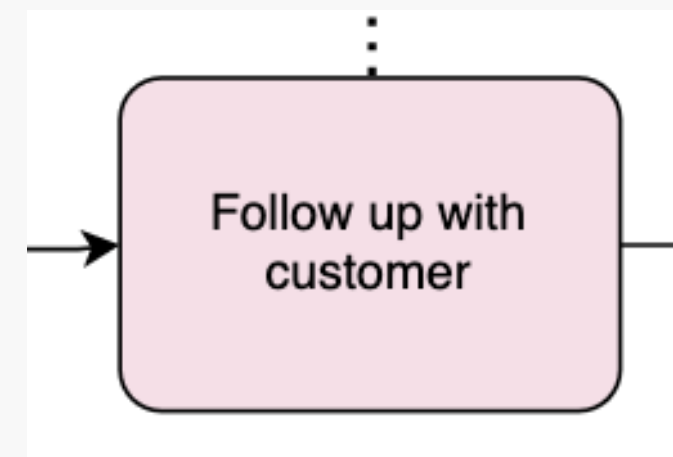

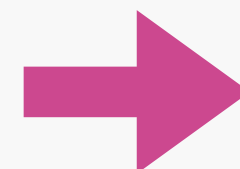

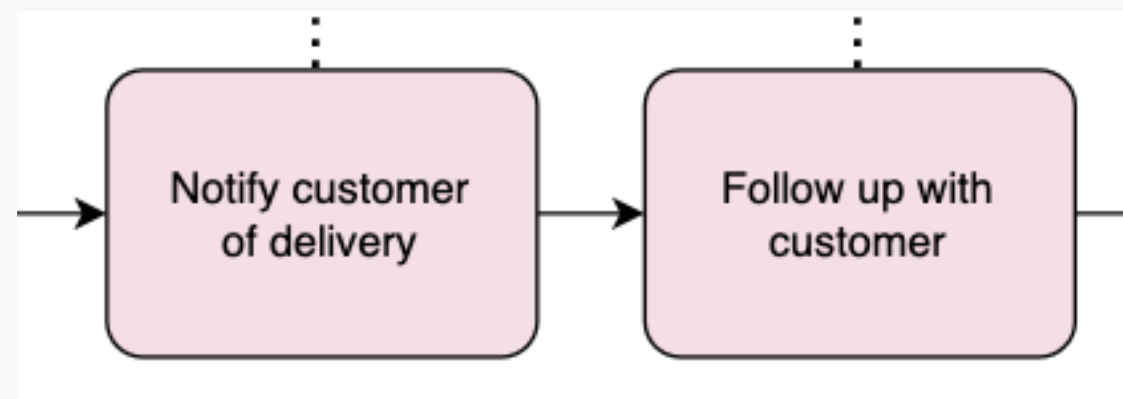

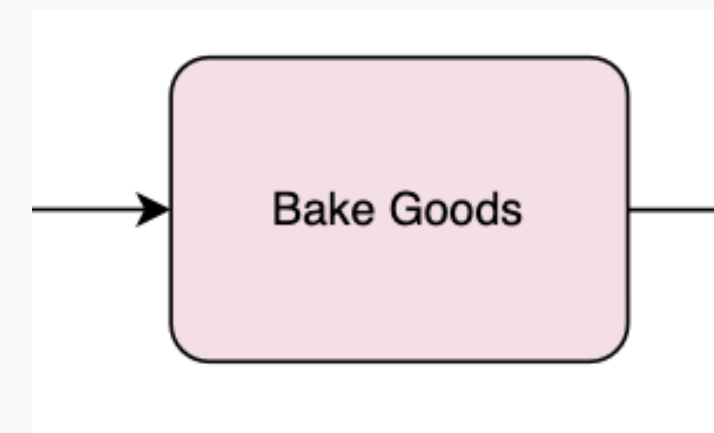

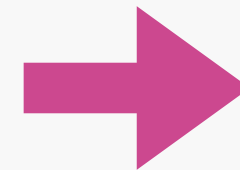

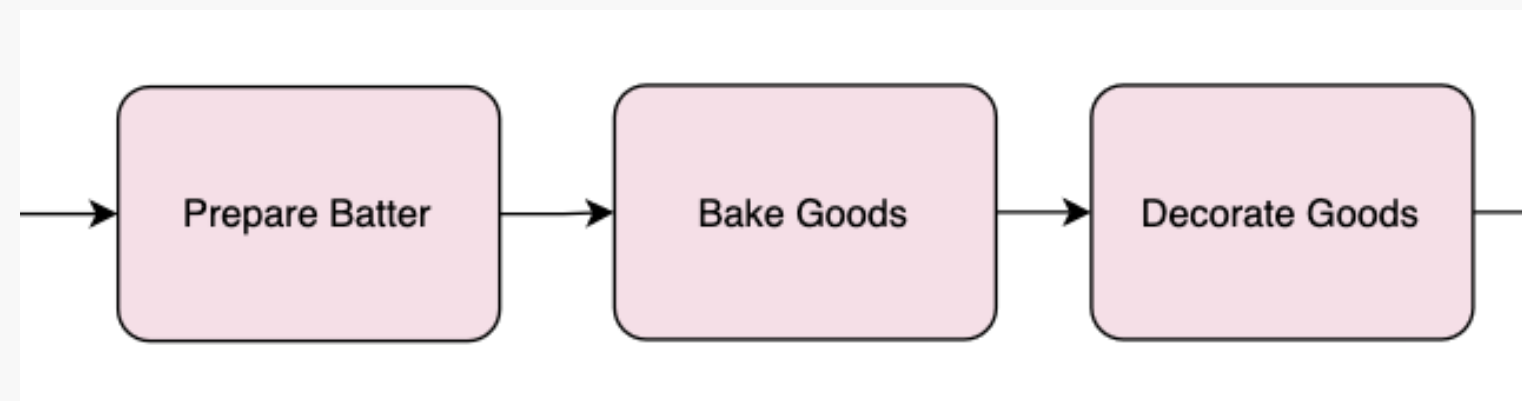

New platform

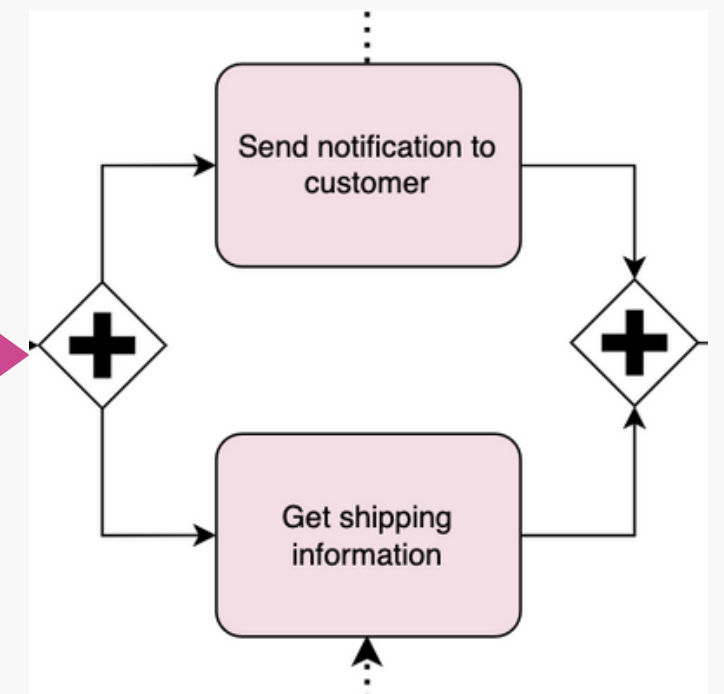

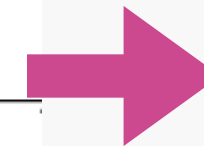

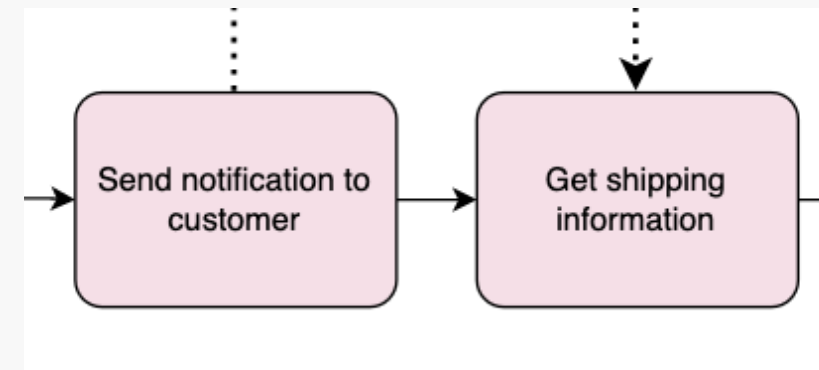

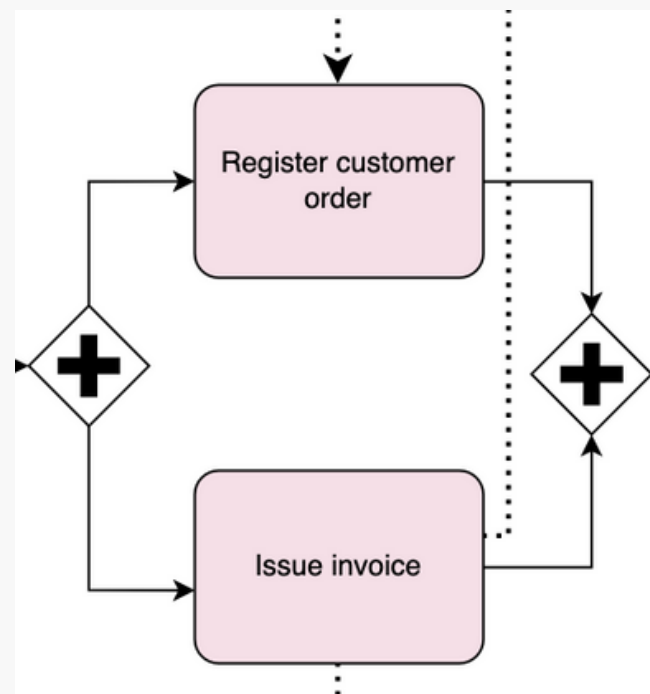

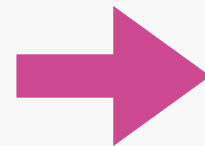

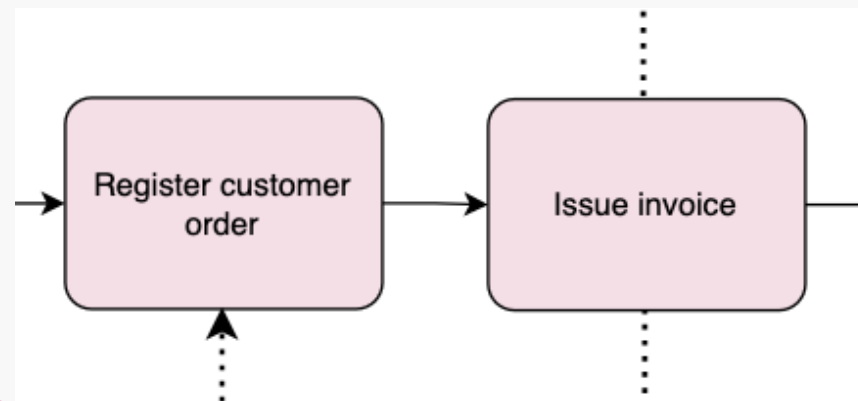

2. Task Composition

"Bake Goods" & "Follow up with customer"

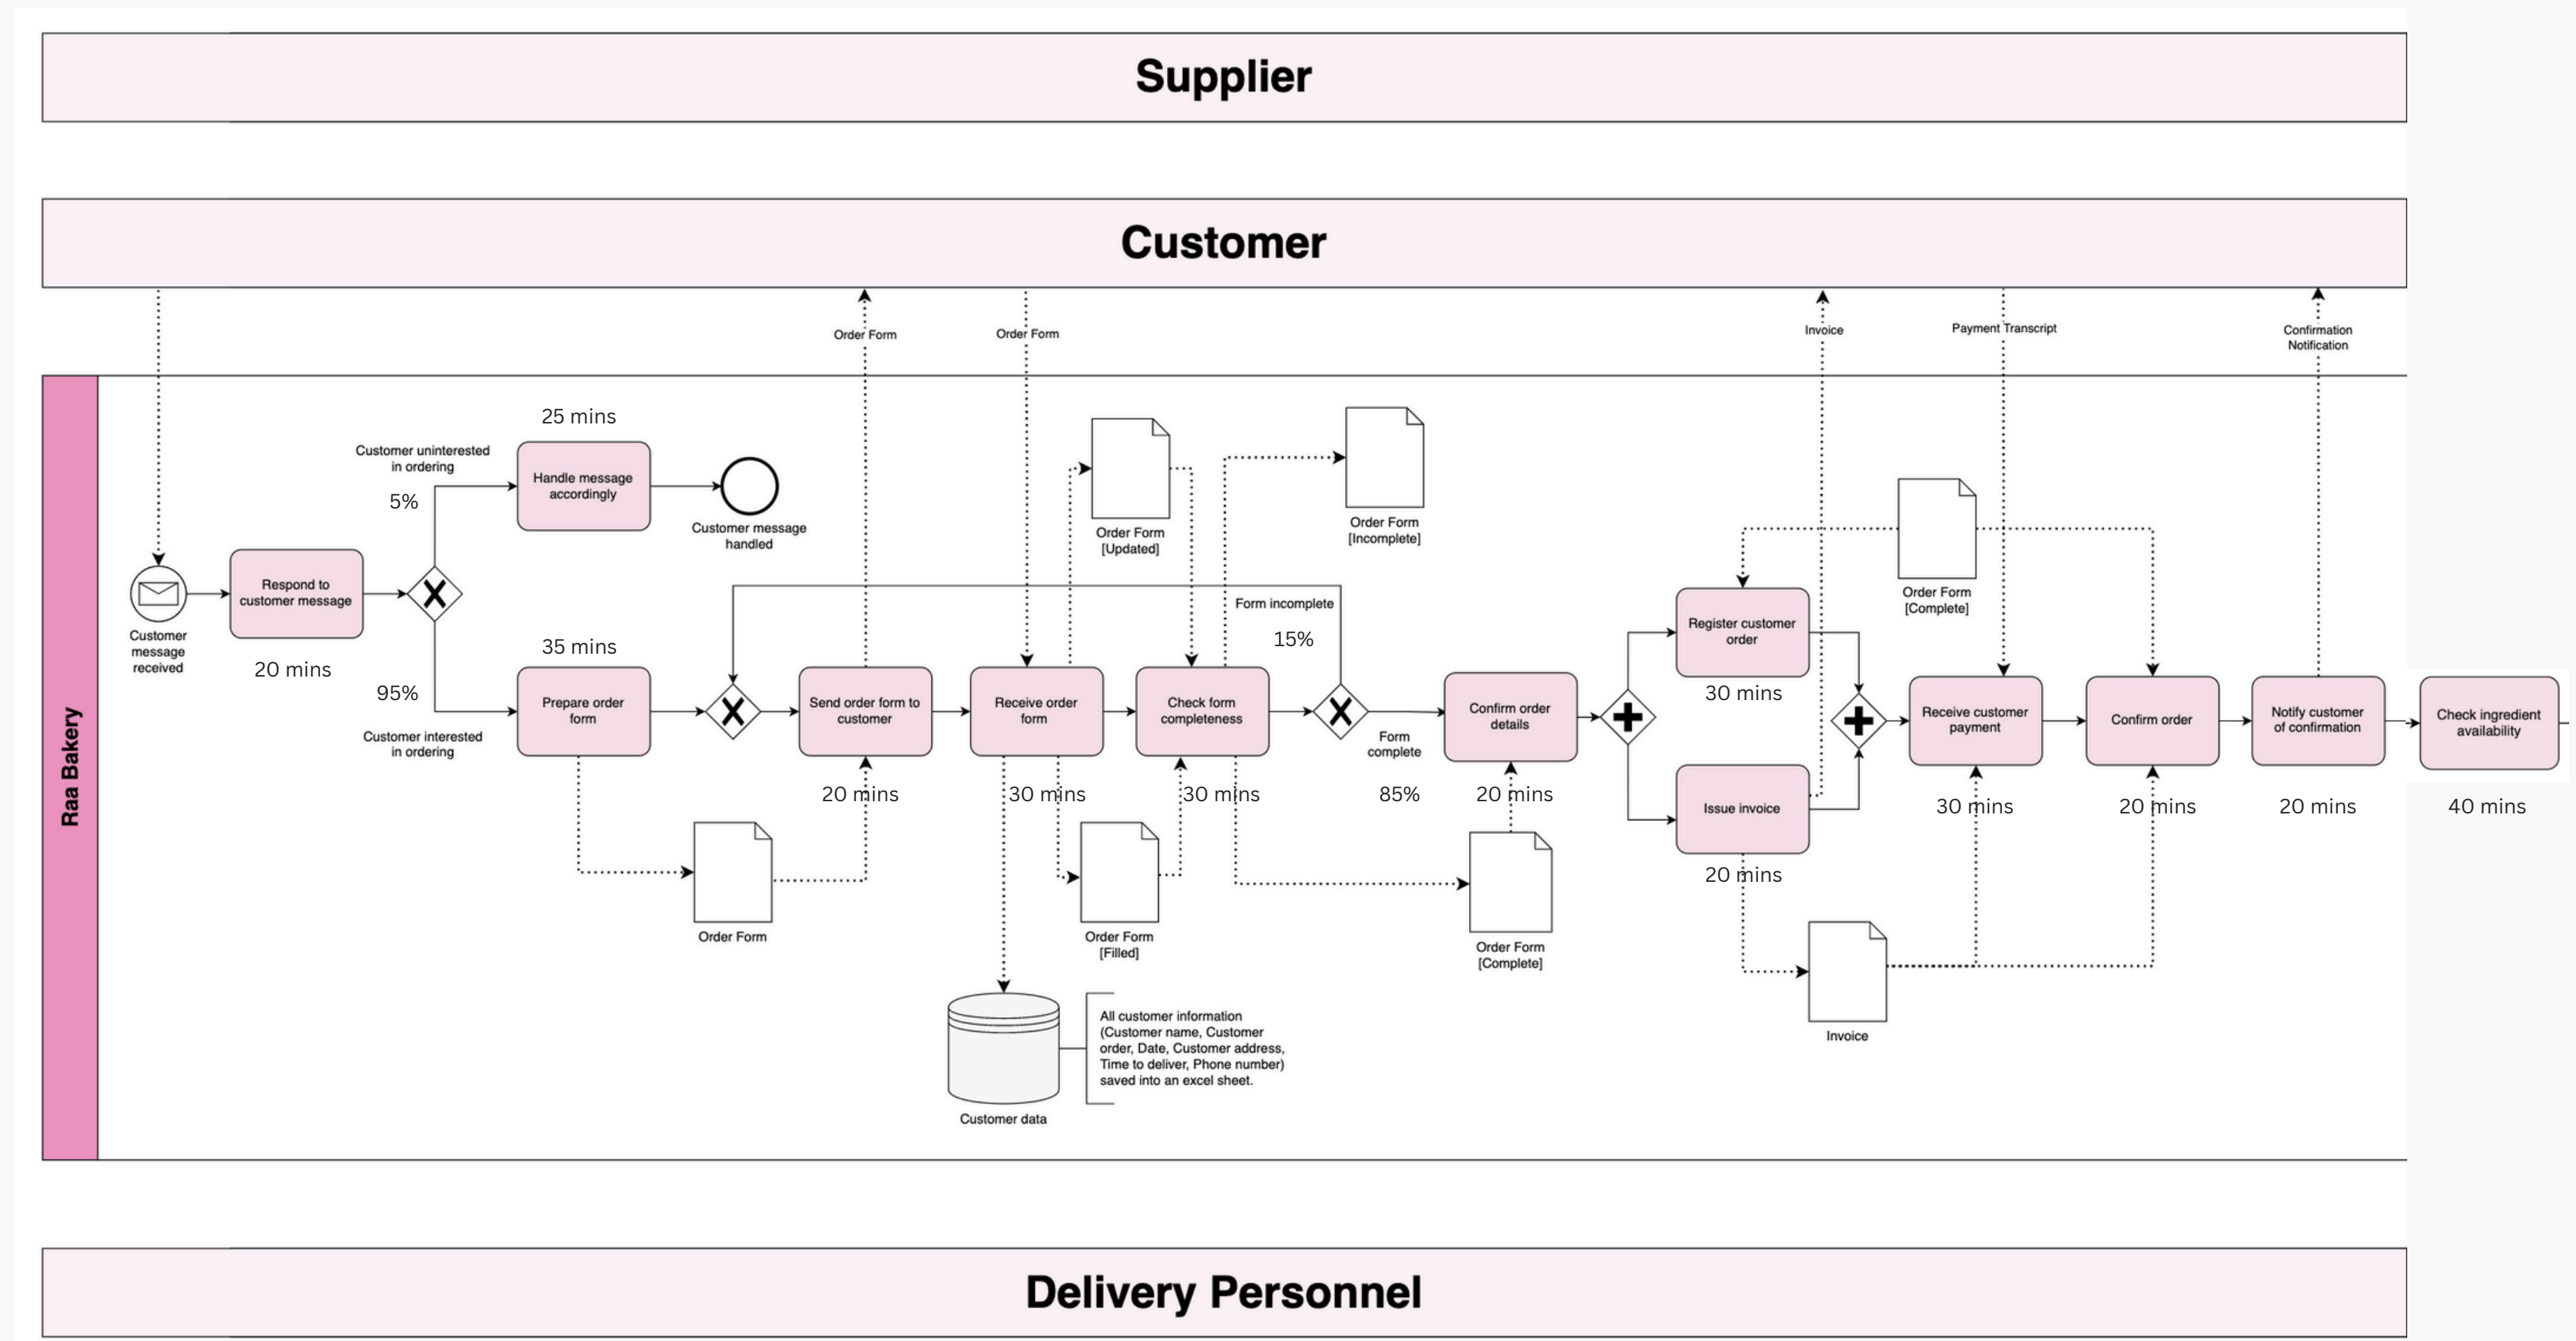

3. Parallelizing

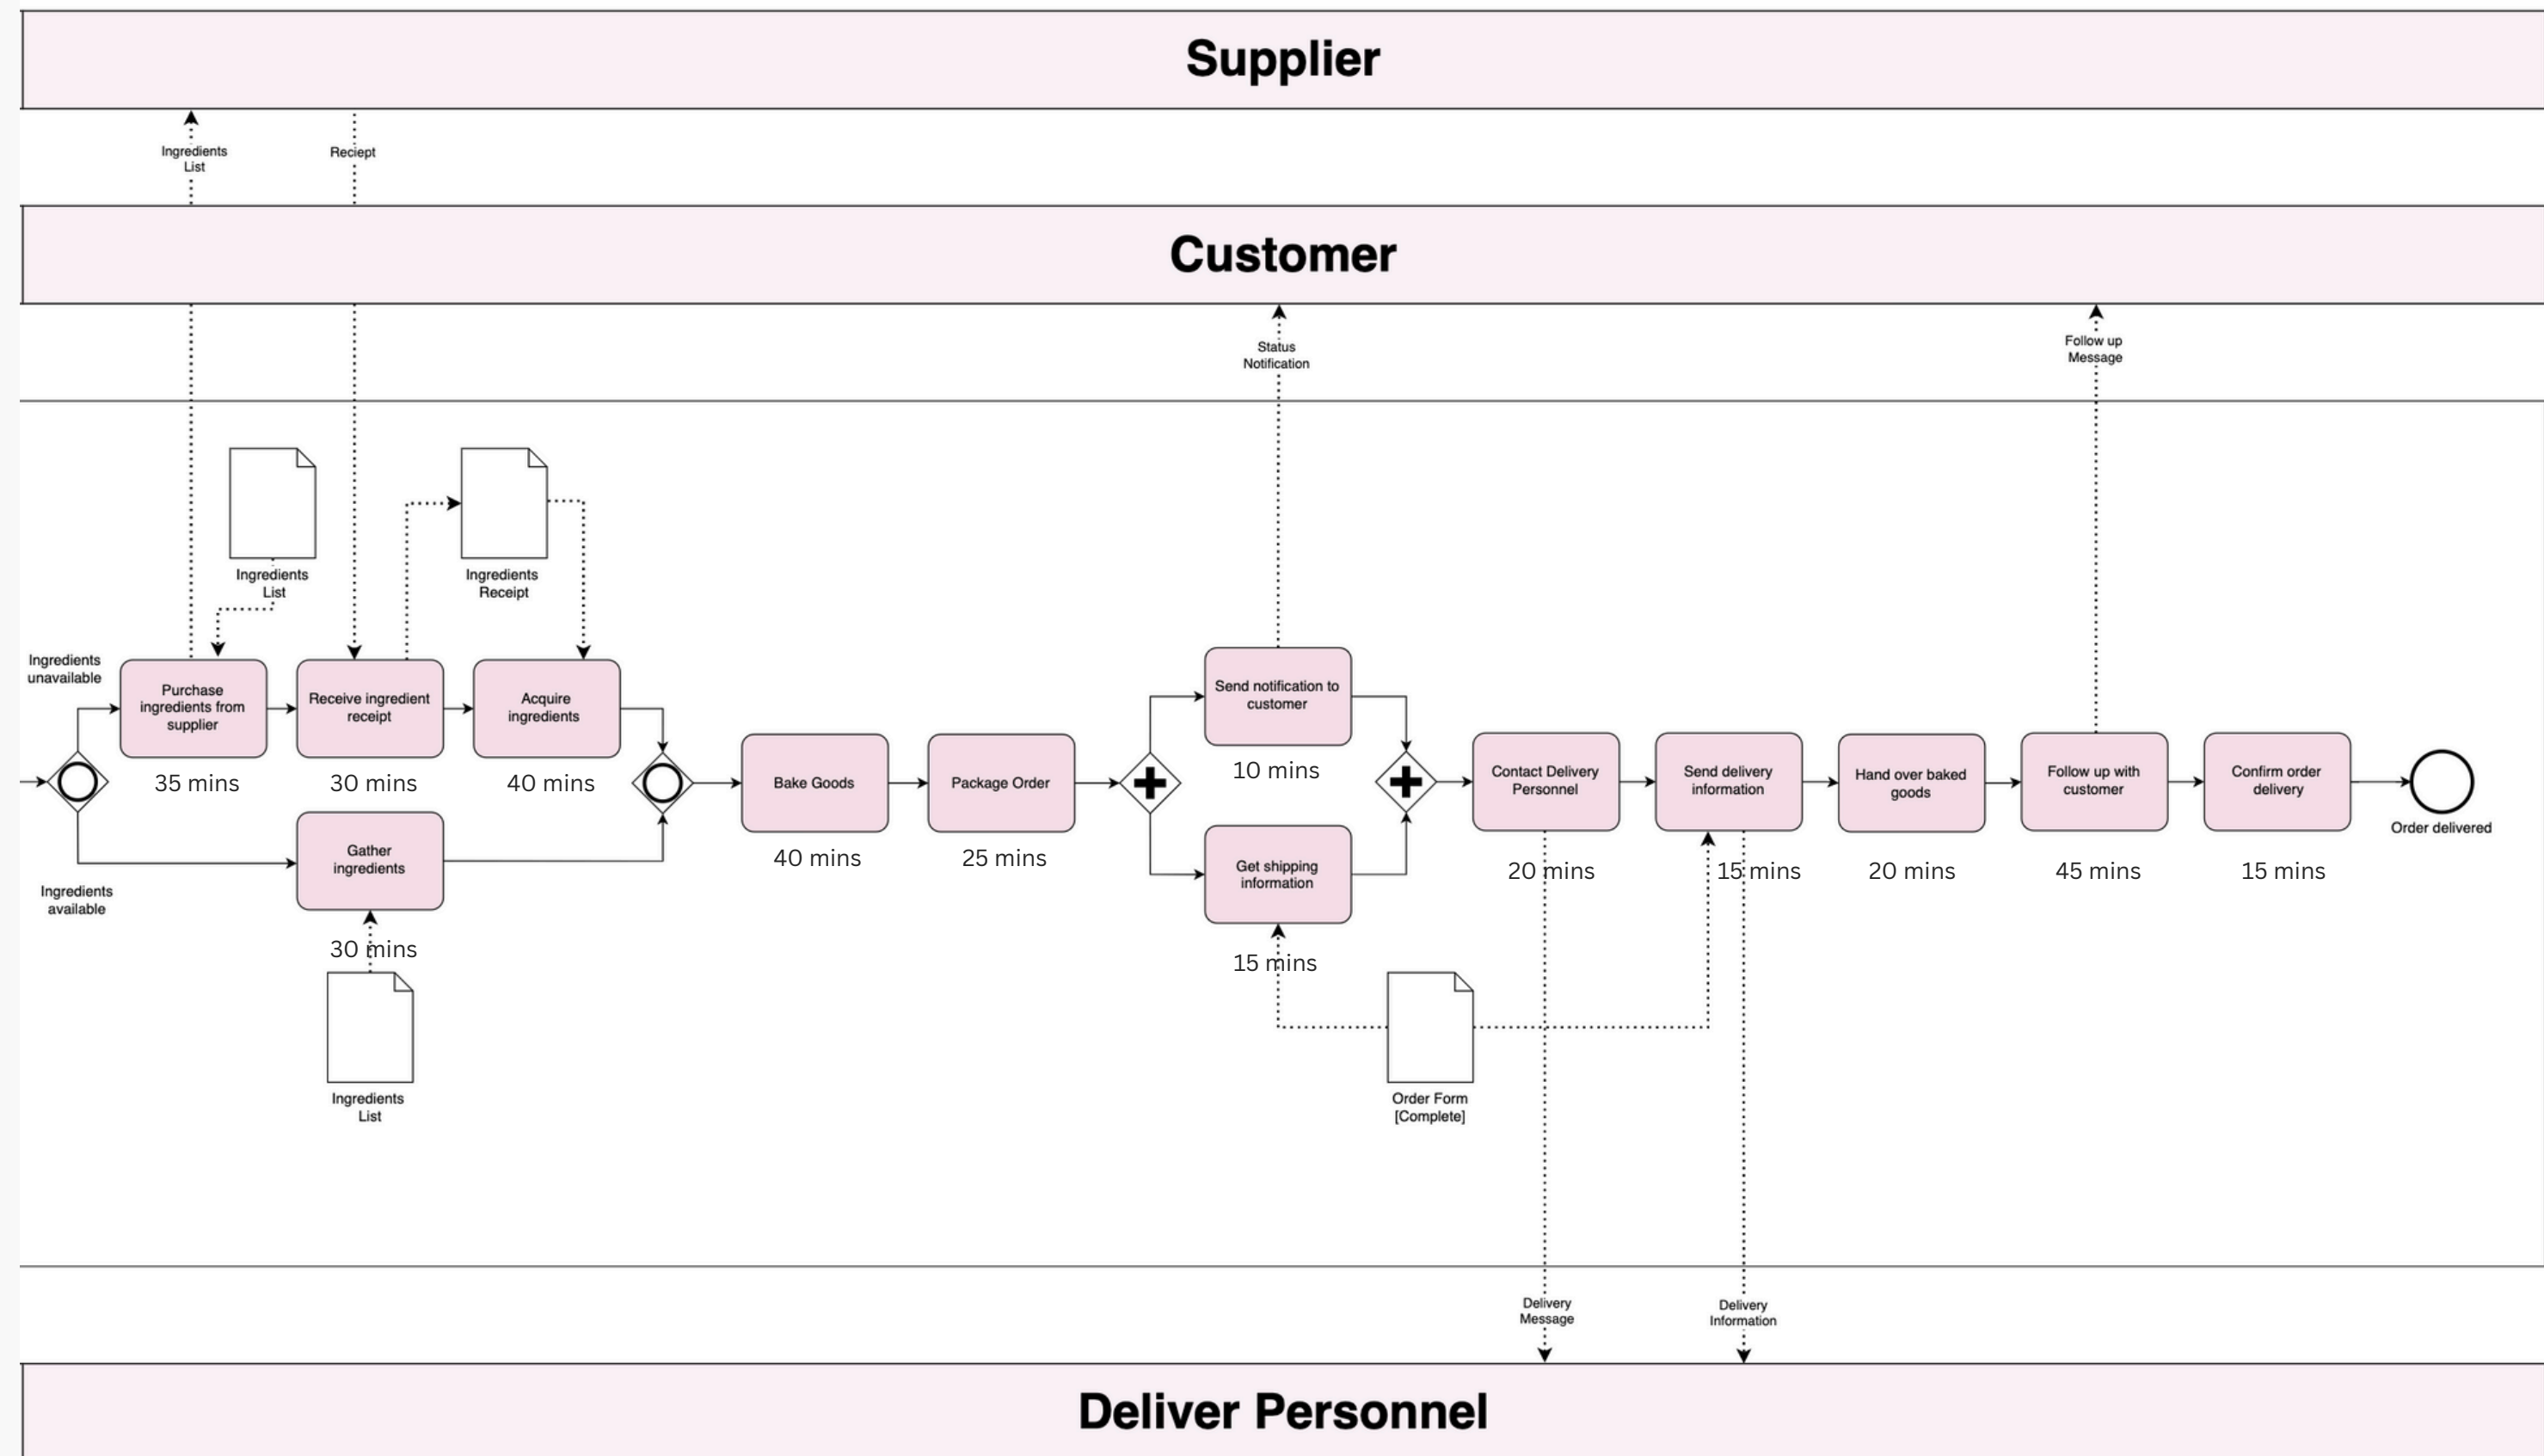

Register customer order + issue invoice & send customer notification + get shipping info

To - be Model

Flow Analysis

$$\text{Cycle Time} = 20 + 34.5 + 82.35 + 20 + 30 + 110 + 105 + 65 + 15 + 115$$
$$= 596.85 \text{ mins}$$

$$\text{Processing Time} = 5 + 15 + 35.29 + 10 + 15 + 35 + 45 + 30 + 5 + 48$$
$$= 243.29 \text{ mins}$$

$$\text{Cycle Time Efficiency} = \text{Processing Time} / \text{Cycle Time}$$

$$243.29 \text{ mins} / 596.85 \text{ mins} = 0.4076 * 100$$
$$= 40.76\%$$

Benefits + Outcomes

Elimination

1

Improvement of efficiency = Improved customer service + profit

2

Composition

Benefit: Reduces the number of tasks to be performed

Complex: Tasks completed in correct order

3

Parallelizing

Benefit: No wait for each task to be finished to begin next

Cost: Expensive, resources of new workers to help

THANK YOU !!
